**CORNUS FLORIDA FLORE RUBRO
RED-FLOWERED DOGWOOD.**

The White-flowered Dogwood is so well-known that it would seem unnecessary to give a description of the beautiful Red-flowered variety other than to say that it is exactly like the parent form, with the exception of its attractive pink flowers.

While the chief difference consists in its having rich pink-colored flowers, there are minor ones as well. The leaves are of a darker green, it is of more compact growth, and it flowers when quite young. It is a common occurrence to find flowers on two or three year old plants.

As with the parent form, it is perfectly hardy. It can be planted in any position where a small-sized, bushy tree, of not over twenty to twenty-five feet in height, would be in place.

The Red-flowered, White-flowered and Weeping Dogwood form a beautiful and interesting group.

**ACER POLYMORPHUM
BLOOD-LEAVED JAPANESE MAPLE.**

This is probably the finest plant ever introduced from Japan.

In the spring, when the foliage is fairly expanded, it is of a deep blood-red color, and this hue is maintained to a great extent throughout the season. Its compact, bushy growth affords an opportunity to use it anywhere, no matter how small a place may be.

Like many other bushy growers, it increases slowly in size, and even when full grown, it is but from twelve to fifteen feet in height, and about the same in width. While used largely as a shrub on the lawn, it is frequently planted to form a bed, or with other Japanese sorts in groups. A bed of it or of mixed kinds always commands attention.

**VIBURNUM PLICATUM
JAPANESE SNOWBALL.**

The Japanese Snowball is one of the few popular shrubs that combine beautiful flowers with rich and ornamental foliage, and that are always used when there is room for but a few of the choicest kinds.

This attractive Snowball forms an upright-growing bush of beautiful outline, quite different from the spreading habit of the common one. The young shoots, both wood and leaves, have a distinct, coppery color, and when the leaves are fully expanded they become of a rich dark olive green, remaining this way until the very last thing in the fall. The foliage contrasts nicely with the flowers, and with that of other shrubs which may be near it.

Either set out singly or planted in groups, nothing exceeds it in beauty.

P. O. STATION "G"

GERMANTOWN, PHILADELPHIA, PA.

DIRECTIONS TO CORRESPONDENTS.

Hedge of Norway Spruce at Weldon, Pa.
(Planted by our firm 40 years ago and still in excellent condition.)

TELEPHONE.—We are connected with the LONG DISTANCE TELEPHONE.

PRICES.—The prices contained herein are the lowest we offer. Five or fifty plants of any one sort sold at the ten or a hundred rates respectively. When more than two hundred and fifty plants of any one sort are required, a special rate may be had on inquiry.

STOCK SELECTED by customers, at the Nurseries, will be charged for at advanced rates, according to the value of the trees chosen.

BOXES AND PACKING will be charged for; but only a sufficient sum to cover the cost of time and material consumed. Our packing is done in the very best manner, and by our method large trees can be shipped in bales to long distances in perfect safety. We advise boxes, however, whenever possible. When no packing directions accompany the order, we use our own judgment in the matter.

SHIPPING.—For small orders, shipment by Express is preferable,—but for long distances freight is quite as good. It must be remembered that freights are very slow, and ample time must be allowed us in shipping goods in this way.

CASH WITH ORDER.—Customers who have not dealt with us heretofore should send cash with order,—old customers can, if they wish, remit on receipt of goods and invoice. All accounts are due, *net cash*, as soon as goods are delivered.

REMITTANCES should be made by Post Office Money Order, payable at Station "G," Philadelphia, or by drafts or checks on Philadelphia or New York banks, or by registered letter. Postage Stamps accepted for small amounts.

ORDER EARLY.—Much time can be saved in the shipping season if customers would prepare and forward their orders for Fall before the first of October, and for Spring, before the first of April. Every attention, however, will be accorded those sending their orders after that time.

SHIPPING SEASON.—In the Fall we usually commence shipping about the 15th of September, continuing until freezing weather comes, and in Spring, about the 15th of March, the season rarely closing until the 10th or 15th of May.

VISITORS are cordially invited to inspect our stock. They should take the train at Twelfth and Market Streets, getting off at Walnut Lane Station; or at Broad and Market Streets, for Carpenter Station. Cabs can be had at either station if desired. The Eighth Street and Germantown Avenue electric cars come within three squares of our nurseries. Leave cars at Church Street (Pelham) Germantown.

PREFACE TO 30th EDITION.

Just forty-five years ago Thomas Meehan, the senior member of the present firm, commenced the nursery business here in Germantown, with but three acres of ground and almost no capital. From the first he saw that in time to come there would be a growing demand for Ornamental Trees, Shrubs and Evergreens of every description,—not only for large private places, but for Parks and Cemeteries, and he determined to shape his business with that idea in view. At that time there was little or no demand for Ornamental Trees, outside of a few of the commoner sorts.

That he was wise in reaching such a decision, and adhering to his belief in a future for such a class of goods, is proven by the extensive plant now conducted by himself and his sons. One hundred and forty acres are closely planted with all that is good and desirable. The newest trees and shrubs are imported annually from all important growers in the world, and thoroughly tested as to their value before being offered to their customers. Every care is exercised that all stock sent out is exactly as represented, strong, thrifty, healthy and well rooted, and every effort is exerted that all dealings shall be satisfactory to their customers. This policy has been strictly adhered to, with the result that not only do their customers continue with them from year to year, but they recommend their friends to deal at these nurseries also.

Acer polymorphum dissectum. *Acer polymorphum reticulatum.*

Acer polymorphum pinnatifolium atropurpureum.—(For prices see page 8.)

Scientific and practical knowledge have been combined to make this the most complete nursery of its kind in the United States. The success achieved has been very great,—superintendents of parks, cemeteries and large estates coming annually to this place to replenish their stock.

The firm believes in furnishing customers with vigorous trees, having an abundance of roots, and for this purpose there are annual applications of manure to the trees, frequent transplanting and thorough cultivation continually.

LANDSCAPE GARDENING AND ENGINEERING.

Platanus orientalis, Oriental Plane.

Bed of Evergreens at Horticultural Hall, Fairmount Park, Phila.

Landscape gardening is an art, and cannot be taken up lightly by the novice with the expectation of achieving great success unless he has a natural gift for it. One must have the power of seeing in the mind from the very beginning not only the appearance of the work when completed, but what the result will be in after years when the trees and shrubs have attained their growth.

Natural beauties must be retained or brought out more strongly, vistas opened where obscured by natural growth, or preserved when new plantings are to be made, and trees of both large and small growth located where they will be of the most service.

Every style of architecture requires a certain arrangement in the planting that one may be in perfect harmony with the other.

Not only, therefore, must one have a gift for creating what may be termed a beautiful picture, he must have as well a thorough practical knowledge of trees and shrubs, that they may be properly placed in the general planting arrangement. How often it is that instead of setting groups of dwarf trees so that an uninterrupted view of some distant point may be secured, large growing ones are carelessly planted in the same situation, or groups of trees that ought to be arranged to produce the effect of a large expanse of lawn, give an entirely opposite result.

The Landscape Engineering Department of this firm is under the personal direction of our Mr. J. Franklin Meehan. Through him we prepare and carry out plans for grading, roadmaking, planting and remodeling of old places, and, in fact, every branch of this work. From our long experience as nurserymen we feel we are especially fitted to give information upon the subject of trees, shrubs and forestry.

Our charges for the work are moderate, and plans are carried out on most favorable terms. Special arrangements made when extensive work is contemplated. Correspondence solicited.

THOMAS MEEHAN & SONS.

HINTS ON TREE PLANTING AND PRUNING.

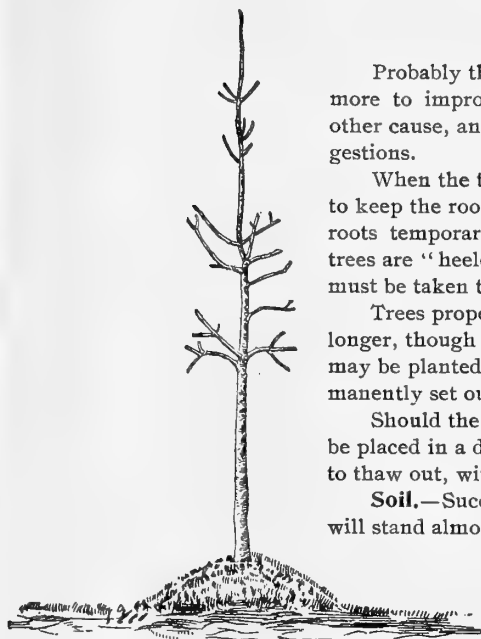

Fig. 1.—Tree planted in a mound where proper drainage cannot be secured in the subsoil.

Probably the loss of the larger number of trees that die after transplanting is due more to improper planting and the neglect to prune them sufficiently than to any other cause, and it is to prevent this as much as possible that we offer these few suggestions.

When the trees are received from the nursery they should be "heeled in" in order to keep the roots moist and free from the air. "Heeling in" is merely putting the roots temporarily in the ground and covering them with a thick layer of soil. The trees are "heeled in" closely, so that a great many can be put in a small space. Care must be taken to pack the earth in tightly against the roots to exclude the air.

Trees properly "heeled in" will keep in good condition for several weeks, or even longer, though it is good policy to have the ground prepared in advance, so that trees may be planted at once upon their arrival, and only "heeled in" until all can be permanently set out.

Should the plants become frozen in transit, no injury will occur if the box or bale be placed in a dark cellar or covered over with straw or similar material and allowed to thaw out, without being exposed to light, air, or any artificial heat.

Soil.—Successful planting depends to a great extent upon the soil. While a tree will stand almost any amount of moisture, it cannot exist if water remains about the roots,—good drainage must be had.

Water will not pass through clay soil, and where the soil is such, a hole should be dug sufficiently deep to pass through the clay to the strata below. Where the clay is too deep for this, other means of drainage must be provided, either by stone drains (tile drains will soon choke up with roots) or by digging very large holes, three or four feet deep, and as wide or wider, and the bottom filled with broken stone or ashes.

Another method of planting when the soil is of this character is to loosen the soil for a foot or so deep, but do not dig a hole. Place the tree on the top of the ground and fill up around it with good soil. This will set the tree in a mound. (See figure 1).

Always dig a larger hole than the roots require, even if it is not filled in with new soil, as it is essential that the ground should be loosened up to provide for good drainage and plenty of moisture. Loose ground absorbs the moisture much quicker than when it is undisturbed. For an ordinary sized tree, say ten to twelve feet in height and one and one-half to two inches in diameter, the hole should be made at least three feet in diameter and two feet deep.

If possible, cart away all the earth taken out and bring new top soil and manure in which to plant the tree,—about one-fourth well rotted manure and three-fourths of top soil.

If any roots are broken, cut them off smoothly with a sharp knife; they will more quickly callus when the surface is smooth.

Set the tree in the hole to about the same depth, or a trifle deeper than it was in the nursery,—the discoloration above the roots will indicate the point. Fill in about the roots slowly, being careful should the tree have a great number of fibrous roots to work the earth well in among them and under the butt of the tree. Fine soil free from large stones or clods of earth should be used for this.

Take a good stout rammer and pack the earth in as tightly as possible as it is gradually filled in about the tree.

If the earth is filled in too fast it cannot be packed tight enough. The object is to press the earth as close to the roots as possible, so that there will be no air between them and the soil. The close pressing soil will enable the roots to take moisture from it readily. There is no danger of packing the soil too hard.

Pruning.—This is an essential feature, and yet it is frequently overlooked by amateurs. A great many trees fail from exhaustion from lack of pruning. A vigorous tree has enough roots to supply it with all the sap it needs; but as soon as it is transplanted it is unable to draw moisture from the earth until new roots are made, and it again becomes established. All this time the branches and leaves are drawing on what sap there is in the tree, and when this becomes exhausted, if new roots have not yet grown, the tree dies.

Fig. 2.—Showing proper pruning of freshly planted trees. Also the fibrous roots of the Pin Oak.

All trees need more or less pruning when transplanted; just how much depends a great deal on the tree to be pruned. A maple, poplar, birch or elm will do with very little pruning, while an oak, beech, chestnut, walnut or ash requires severe cutting. The roots which a tree has must also be taken into consideration. If it is well furnished with roots and fibres, it will require less pruning than if it has but a few stout roots devoid of fibres. (See Fig. 2).

In a general way, it may be said that hard wooded trees require severe pruning, while those having a soft, sappy wood need but a light one. This does not always apply. A Pin Oak has very fibrous roots, as a rule, and moves quite easily without much pruning, though some will consider it advisable to do severe cutting even in its case. On the other hand, the larch, which has a very soft, sappy wood, but practically no fibres, and, in fact, but little root, must be pruned closely, to get it to transplant well.

Mulching.—This consists of putting a thick layer of straw, hay or well rotted manure on the surface of the ground about the tree, covering the earth disturbed when the tree was planted. It should be put on at least three or four inches thick.

Manure makes the best mulch, as it acts as a fertilizer as well,—the rains washing its substance down to the roots from time to time.

We advise mulching for both Spring and Fall planted trees and shrubs. It prevents the drying out of the soil and retains moisture during the summer, and in winter the frost does not penetrate as deep as would otherwise be the case.

More might be written on this subject; but we think what we have stated will be sufficient. In short, the vital points are,—a large hole, good soil tightly packed about the roots, ample pruning and a good mulching.

PRUNING OF FLOWERING SHRUBS.

Deutzia scabra—Unpruned.

In the winter season much of the pruning of flowering shrubs is performed, and usually the operation takes with it all the flower buds that should clothe the plant with a mass of bloom during the spring and early summer. This is because gardeners do not consider the flowering habits of the various shrubs with which they have to deal. To prune away, in winter, the young wood from a Weigela, Deutzia, Mock Orange, Lilac, or Bush Honeysuckle, takes with it all the bloom of the following spring. This is usually the case, however, when indiscriminate pruning is practiced.

There are very few shrubs that may be severely cut in winter. The Hardy Hydrangea, Althæa, and some smaller shrubs like the Hypericum, form their flower buds on the young growth made in the summer of the same year they bloom, but nearly all other shrubs make their flower buds on the young growth made the season previous to their expanding.

The proper system of pruning is one that will induce an abundance of young wood, and this can only be accomplished by the trimming out of much of the two year old growth,—that which has already flowered,—cutting out the old shoots close to the ground, so that the new growth will push out from the root of the plant. If the bush make too strong and rank a growth, a moderate amount of pruning in winter will not lessen the bloom to any extent, especially as the extreme ends of the young wood do not flower.

Summer pruning of flowering shrubs is practiced by some gardeners with success, after the plants have done blooming, but in this case it must be done with great care, as the cutting away of much wood when in full leaf tends to weaken the plant, while the object to be gained is to foster a strong and vigorous growth. It is an excellent time, however, for a moderate pruning.

Deutzia scabra—Properly pruned.

DECIDUOUS TREES.

"SEED" indicates that the stock is in the original seed-beds.

"TRANS." or "Tr." indicates transplanted stock.

FIGURES IN PARENTHESES indicate about the height of the tree when at from twenty-five to thirty years of age.

PRICES:—Five plants of any one variety of the same size furnished

at the rate per 10, fifty at the rate per 100. When 250 or more are required, a special price will be given by letter.

TREES SELECTED by customers in the nurseries will be charged for accordingly. When customers do not specify the size or price of the tree wanted, it must be taken for granted that the selection of a suitable size is left to our judgment.

ACACIA. Mimosa Tree.

Acacia Julibrissin. (10 to 15 ft.) A low growing, spreading tree, with feathery foliage. Requires protection north of Philadelphia.

2 to 3 ft.	Trans.....	\$ 50 each	\$3 50 per 10
5 to 6 ft.	"	75 "	6 00 " 10

ACER. Maple.

There are but few trees as popular as Maples. For street, avenue and other places where shade is required, the Silver, Norway, Sycamore, Red and Sugar are invaluable. The Silver is the fastest grower of all; but for permanency the others are sometimes preferred.

Acer campestre. European Cork Maple. (20 to 25 ft.) A small sized tree, with round or spreading head, and handsome, neat foliage. Can be grown as a large shrub if desired. Valuable for grouping or for planting on high, dry ground, where it thrives especially well.

5 to 6 ft.	Trans.....	\$ 75 each	\$6 00 per 10
------------	------------	------------	---------------

" dasycarpum. Silver Maple. (50 to 60 ft.) One of the best of trees when very quick growth, large size and light foliage are required. Trimmed moderately, annually, it becomes of fine shape. A beautiful ornamental tree if given ample room to develop. It is particularly useful for planting on wide streets or avenues, and especially so on building sites, where it is desirable to get a large growth as quickly as possible. We recommend it for this purpose rather than the Carolina Poplar, which is now so largely used.

5 to 6 ft.	Trans.....	\$ 35 each	\$2 50 per 10	\$15 00 per 100
9 to 10 ft.	"	50 "	3 50 "	25 00 " 100

14 ft.	" 2½ in.	2 25 "		

" var. Wierii. Wier's Cut-leaved Silver Maple. (35 to 40 ft.) This remarkably beautiful tree has a partly drooping habit and finely divided leaves. It is a rapid grower and an excellent lawn tree; it is desirable also for lining carriage drives, and is used occasionally for street planting.

5 to 6 ft.	Trans.....	\$ 65 each	\$5 00 per 10
------------	------------	------------	---------------

" lætum (colchicum rubrum.) (25 to 30 ft.) A large sized species, from Japan, making a medium sized tree. The young growth of both wood and foliage is of a brilliant red, and when mature, of a shining green. The foliage remains on the tree until late fall without changing color. By cutting down once or twice when young a large bush-like tree can be had. It is also a valuable street tree south of Philadelphia.

5 to 6 ft.	Trans.....	\$ 50 each	\$3 50 per 10
------------	------------	------------	---------------

" macrophyllum. Oregon Maple. (35 to 40 ft.) This fine tree has foliage much like the European Sycamore Maple, a tree which it much resembles in other respects as well, excepting that it is more round-headed.

3 to 4 ft.	Seed.....	\$ 50 each
------------	-----------	------------

" obtusatum A species from Southern Europe, of medium growth, and with fair sized foliage. A pretty, ornamental tree.

2 to 3 ft.	Seed.....	\$ 35 each
------------	-----------	------------

Acer platanoides. Norway Maple. (40 to 50 ft.) A large handsome, round-headed tree, bearing numerous large, dark green leaves, which remain on the tree until late in the fall. Extremely valuable for street and avenue planting, and for lawns, where a spreading tree is wanted.

6 to 7 ft.	Tr.....	\$ 35 each	\$2 50 per 10	\$20 00 per 100
9 to 10 ft.	"	50 "	4 00 "	30 00 " 100

4 to 5 ft. " 65 " 5 00 " 10

" **trilobatum (monspessulanum.)** (7 to 10 ft.) This is of but medium growth with us. The leaves though smaller, remind one of the Sycamore Maple.

2 to 3 ft. Trans.....\$ 50 each \$3 50 per 10

JAPANESE MAPLES.

The Japanese Maples are so shrub-like in growth, and, many of them, of such beautiful colors, that we class them by themselves. Because of these characters they are much used for forming permanent beds for color in summer. The blood-leaved, atropurpureum, is very much in demand. In groups, they can be planted about four feet apart.

Acer Japonicum. Japanese Maple. (10 to 15 ft.) This is a slow growing sort, with dark green leaves.

18 to 24 in. In pots.....\$1 50 each \$12 50 per 10

" **var. aureum.** Golden-leaved. (8 to 10 ft.) A golden-leaved variety of the above, one of the most desirable sorts, and quite scarce.

18 to 24 in. In pots.....\$1 50 each \$12 50 per 10

" **var. lætum.** (12 to 15 ft.) This variety produces young leaves of a deep red, which give way to green later on; of larger growth than the other sorts.

2 ft. Trans.....\$ 50 each \$3 50 per 10

4 to 5 ft. " 1 00 " 7 50 " 10

" **var. palmatum.** (12 to 15 ft.) A large, broad-leaved sort, the foliage of which is of a light green. One of the stronger growing kinds.

2½ to 3 ft. In pots.....\$1 50 each \$12 50 per 10

3 to 4 ft. " 2 00 " 15 00 " 10

" **polymorphum.** Japan Maple. (12 to 15 ft.) This is a large growing shrub with small, deeply lobed leaves of a coppery green. It is the parent form of many of the beautiful "Japanese Maples" in cultivation. For planting as a single tree on the lawn it is most desirable, its feathery green leaves making its appearance distinct from that of any other tree.

18 to 24 in. Trans.....\$ 75 each \$5 00 per 10 \$35 00 per 100

2 to 2½ ft. " 1 50 " 12 50 " 10

3 to 4 ft. " 2 00 " 17 50 " 10

" **var. atropurpureum.** Blood-leaved Japan Maple. (12 to 15 ft.) This is the most popular of all kinds with beautiful foliage. It is identical in growth and form of leaf with the preceding one, but produces foliage of blood-red color. Besides that it is pretty all through the season it is particularly fine when its foliage is fully expanded in early spring. It is generally used for planting in groups to obtain a mass of crimson color, but can be used equally as well as a single specimen. (see colored plate.) One plant by mail postpaid for 50 cents; large for \$1 00.

8 to 12 in. Trans.....\$ 50 each \$3 50 per 10 \$25 00 per 100

12 to 18 in. " 75 " 6 00 " 10 50 00 " 100

BENTHAMIA.

Benthamia Japonica (Cornus Kousa.) (12 to 15 ft.)

The Japanese representative of our large White Dogwood, *Cornus florida*, which it resembles a great deal, but it blooms later, the flowers appearing in early June, two weeks after the Dogwood.

12 to 18 in. Trans.....\$ 35 each

BETULA ALBA LACINIATA.

(Cut-leaved Weeping Birch.)

This is one of the most beautiful of all Birches. The leading shoot grows perfectly straight and the main branches are the same as those of the common European White Birch, but the twigs are quite light and are gracefully pendulous.

On this account, and because of its beautiful cut leaves it is highly esteemed.

It is particularly useful for planting as a single specimen or in groups on the lawn, or for a specimen tree in a cemetery.

BETULA. Birch.

The quick growth, light branches and airy appearance of most all birches, and the beautiful bark of many, make them indispensable trees to all planters. They thrive on high, dry or stony soils, as well as in ordinary places.

Betula alba. European White Birch, (35 to 40 ft.) One of the most valued of trees because of its rapid growth, pretty foliage and white bark. At the age of but 4 to 5 years the white bark begins to appear. It does not make as large a tree as the canoe birch, and it is more compact in habit; the leaves, too, are smaller.

4 to 5 ft. Trans.....\$ 35 each \$2 50 per 10 \$15 00 per 100

CYTISUS. Laburnum.

Cytisus Laburnum. (15 to 20 ft.) This is barely a tree, in fact it is often seen in shrub shape. It is well known for its lovely racemes of yellow flowers, which appear about the 1st of June.

3 to 4 ft. Trans.....\$ 35 each \$2 50 per 10 \$15 00 per 100
5 to 6 ft. "..... 50 " 3 50 " 10 25 00 " 100

DIOSPYROS. Persimmon.

Diospyros Virginiana. (30 to 35 ft.) This makes a good sized tree, and bears fruit which is generally liked when thoroughly ripe. Wild kinds are often met with bearing larger fruit than common, and attempts to improve this fruit are being made. The flowers are greenish purple and of no beauty.

5 to 6 ft. Trans.....\$ 75 each \$5 00 per 10

DIMORPHANTHUS.

Dimorphanthus Mandshuricus. (Aralia.) (15 to 20 ft.)

The description of *Aralia spinosa* almost fits this tree. This one, however, grows rather taller than *Aralia*, and its immense panicles of white flowers are produced towards the close of July, a week or more in advance of *Aralia*. As it suckers from the root it should be planted where a large clump of it can be formed. 12 to 18 in. Trans.....\$ 35 each \$2 50 per 10

FAGUS. Beech.

Beeches have long been deemed indispensable to the landscape gardener. Their glossy foliage, the pendulous habit of the Weeping, finely cut leaves of the Fern-leaved and the purple of the Blood-leaved, are what entitle them to this distinction. The white bark of the American is in nice contrast with the darker hue of the English and its varieties. Like all hard wooded trees, they require severe pruning when transplanted.

Fagus Americana. American Beech. (40 to 50 ft.) A magnificent tree, of large, round, spreading growth. Conspicuous for its almost white bark. On lawns it is usually allowed to grow branched close to the ground, thus making a beautiful specimen. Prune close when transplanted.

5 to 6 ft.	"	1 50 "	12 50 "	10 "

FAGUS SYLVATICA PENDULA.

(Weeping Beech.)

The Weeping Beech is adapted for planting with groups of other trees as well as for single specimens.

The unique character of growth,—which is usually more distorted than is shown in the illustration, gives it a position unoccupied by any other weeping tree.

The remark is often made that as a single tree it is not pretty, but it is exactly this feature that makes it valuable. The regular outlines of many other trees makes it necessary to plant something to break the monotony, to give relief from these regular lines, and it is then that the Weeping Beech is most useful.

A unique effect is produced by planting three in a group a few feet apart.

FRAXINUS. Ash.

While large growth and light foliage characterize all kinds of ash to a more or less extent, there is much difference in the species. It is a hard wooded tree, consequently it needs severe pruning when transplanted.

Fraxinus Americana. American Ash. (50 to 60 ft.) A very fine, large, rapid growing tree, just the tree for parks, large public grounds, or for street planting. Should be pruned closely when moved.

--------------	--------------	---------

" **hypoleuca.** (25 to 30 ft.) A new and rare species from Japan, approaching *tripetala* in general appearance, but quite distinct. The flowers are large, cream colored, the base of stamens crimson, pistil purple. They appear early in June and are slightly fragrant.

2 to 2½ ft.	In pots.....\$	1 50 each	\$12 50 per 10
-------------	----------------	-----------	----------------

Crataegus Oxyacantha, English Hawthorn.

Liquidambar styraciflua, Sweet Gum.—For prices, see page 15.

MAGNOLIA SOULANGEANA.

Probably no flowering tree attracts so much attention as this one when it is covered, in the Spring, with its abundance of large-sized flowers. They appear in such quantities as to completely clothe the tree, and the flowers are equally abundant each season.

They can be planted either as single specimens, or in groups of two or three: or an equally attractive group can be formed by planting the *Magnolia Soulangeana*, the *M. conspicua*, and the *M. purpurea*. The *M. Halleana* can also be advantageously added to the group, as it is the first in Spring to open its flower-buds, although the plant is much more dwarfish in habit.

Magnolia Kobus (Thurberi). (12 to 15 ft.) Another Japanese species, making a small tree of beautiful proportions. The small white flowers appear early, about the same time as those of *conspicua* do. It does not bloom freely until it gets of good size. The dark green foliage makes it also a very pretty tree for ornamental planting.
12 to 18 in. Trans.....\$ 35 each

“ **Lennei.** (15 to 20 ft.) A beautiful sort, making a large growth, which can be controlled to form a shrub or make a small tree. The flowers are large, cup shaped, rose colored, expanding towards the close of April. A scarce and valuable sort.
3 to 4 ft. Trans.....\$ 1 00 each

“ **Norbertiana.** (15 to 20 ft.) A shrub sort, with large, light pink flowers, which expand about the third week in April.
18 to 24 in. Trans.....\$ 50 each

“ **purpurea (obovata).** (8 to 10 ft.) There are but few shrubs among magnolias such as this is. The growth is stocky, forming a thick bush. The large, purple flowers appear at the beginning of May, and it is two to three weeks later before all are expanded. A useful sort for massing or planting with shrubs.
12 to 18 in. Trans.....\$ 35 each \$2 50 per 10
2 to 3 ft. “ 50 “

“ **Soulangeana.** (15 to 20 ft.) Perhaps the most popular of all Magnolias, being of vigorous growth, and blooming profusely, even when quite small. The flowers are large, pink on the outside of petals and white inside. In average seasons the flowers open in the third week in April. It can be grown as a small tree or large shrub, as a single specimen or in masses. (See cut above.)

3 to 4 ft. "	50 "	3 50 " 10

Quercus palustris, Pin Oak.

QUERCUS. Oak.

On account of a reputed slow growth, which reputation is undeserved, oaks were formerly not so extensively planted as they ought to have been; but now the demand exceeds the supply. In point of fact they are not at all slow growing; but keep pace with most other trees. Our own country is particularly rich in Oaks, and of these we are pleased to offer every species obtainable that will grow in Philadelphia. Many are of uncommon beauty, and for avenues, parks, public grounds and similar places, where they can be given room to develop, they will prove of great value. When transplanted they require severe pruning, which will cause them to quickly recover and soon make rapid growth again.

Quercus alba. White Oak. (50 to 60 ft.) One of the largest and fastest growing Oaks, forming a wide spreading head when fully developed. The foliage takes on a light purplish hue in late autumn. Suitable for avenue planting.

2 to 2½ ft. Trans	\$ 50 each	\$ 3 50 per 10
5 ft. "	75 "	6 00 " 10

" **Bannisteri.** Scrub Oak. (8 to 10 ft.) This makes but a good sized shrub, bearing acorns when but three to four feet high. Besides as a curiosity it is excellent for planting to form thick covers and masses. It will thrive in the poorest and driest soils.

12 to 18 in. Seed.....	\$ 25 each	\$1 25 per 10	\$ 8 00 per 100
------------------------	------------	---------------	-----------------

" **bicolor.** Swamp White Oak. (40 to 50 ft.) A massive tree when fully grown. It bears quite large, dark green leaves and acorns of large size. This sort requires less pruning when transplanted than some of the others. We consider it one of the best sorts for ornamental planting. It thrives quite well in either wet or dry situations.

4 to 5 ft. Trans.....	\$ 65 each	\$ 5 00 per 10
-----------------------	------------	----------------

Quercus cerris. Turkey Oak. (30 to 35 ft.) This makes a medium sized tree, of thick, dense growth, and, as with other European sorts, it keeps its foliage green, without change, until destroyed by frost. The acorns are in a rather mossy cup. A remarkably pretty ornamental sort.

4 to 5 ft. Trans.....\$ 65 each \$5 00 per 10

" **coccinea.** Scarlet Oak. (50 to 60 ft.) This is perhaps the most esteemed of all Oaks. Not only does it make a large, well shaped tree, but in the fall the foliage changes to a brilliant scarlet. It makes a fine street or avenue tree; but should be severely pruned when transplanted. It has very large, leathery leaves of a rich green color.

3 to 4 ft. Trans.....\$ 50 each \$3 50 per 10 \$25 00 per 100

5 to 6 ft. " 75 " 6 00 " 10
10 ft. " 1 50 "

SALIX. Willow.

Willows comprise a useful and large class of trees. Planters find them very useful. Some of them have highly colored wood in winter, such, for instance, as the Vitellina, yellow, and Britzensis, flame colored. The list of willows is such a large one, and many are so difficult to distinguish from others, that the names can hardly be guaranteed.

Salix alba. White Willow. (30 to 35 ft.) A European sort, with light colored leaves. It makes a good sized tree.

2 ft. Trans. \$ 25 each \$1 50 per 10 \$10 00 per 100
4 ft. " 35 "

annularis. Curled or Ring Willow. (25 to 30 ft.) The leaves curl curiously, in ring shape. A unique sort, useful in ornamental grouping.

2 to 3 ft. \$ 25 each \$1 50 per 10
6 to 8 ft. 1 00 "

aurea pendula. Golden Weeping Willow. (30 to 35 ft.) The bark of this sort is of a bright golden color. The branches are somewhat drooping. It makes a medium sized ornamental tree.

4 to 5 ft. \$ 35 each \$2 00 per 10 \$10 00 per 100
10 ft. Trans. 1 00 " 7 50 " 10

Babylonica. Weeping Willow. (35 to 40 ft.) Too well-known to need description. It need not be confined to damp places; and this holds good with all willows. Prune closely when transplanted.

4 to 5 ft. \$ 35 each \$2 00 per 10 \$10 00 per 100
8 to 10 ft. 1 00 " 7 50 " 10

caprea. Goat Willow. (10 to 15 ft.) A large, bush-like sort, and quite ornamental when its catkins are expanded in early spring. Known better, perhaps, as the "Pussy Willow."

1 to 2 ft. \$ 25 each \$1 00 per 10 \$6 00 per 100

var. pendula. Kilmarnock Weeping Willow. (5 to 6 ft.) Grafted on stems five to six feet high it forms an umbrella shaped head, which makes it of much use to planters. It is a well known weeping sort.

5 ft. Trans. \$1 00 each \$7 50 per 10

Forbyana. (10 to 12 ft.) A strong growing, bush-like sort, perhaps the best of all for basket purposes.

1 to 2 ft. \$ 25 each \$1 00 per 10 \$6 00 per 100

Japonica. (20 to 25 ft.) This has broad, shining green leaves, making it quite ornamental.

1 to 2 ft. \$ 25 each \$1 00 per 10 \$6 00 per 100

Salix pentandra. Laurel leaved. (20 to 25 ft.) One of the best for foliage, which is of a bright shining green, remaining on the plant late in the fall. A fine sort for massing, and valuable for planting at the seashore.

18 to 24 in. Cuttings. \$ 25 each \$1 00 per 10 \$6 00 per 100
2 to 3 ft. Trans. 35 " 2 00 " 10 12 00 " 100
5 to 6 ft. " 50 " 3 50 " 10
10 ft. " 1 00 " 7 50 " 10

purpurea pendula. (5 to 7 ft.) A weeping form, with purple branches, which when grafted on tall stems is very useful for planting on the lawn.

1 to 2 ft. \$ 25 each \$1 00 per 10 \$6 00 per 100

rosmarinifolia. Rosemary Willow. (5 to 7 ft.) This has quite small, light green foliage and slender twigs. Grafted on tall stems, it makes large round heads. A desirable, ornamental, lawn tree.

1 to 2 ft. \$ 25 each \$1 00 per 10 \$6 00 per 100

Sieboldiana. A Japanese species, having shining green leaves.

1 to 2 ft. \$ 25 each \$1 00 per 10

Villarsiana. This has yellow wood and whitish green leaves.

1 to 2 ft. \$ 25 each \$1 00 per 10

viminialis. (30 to 35 ft.) A strong growing Willow.

1 to 2 ft. \$ 25 each \$1 00 per 10

vitellina. Golden Willow. (15 to 20 ft.) This is valued very much for its bright golden-barked twigs in the winter season, for the effect of which it is much planted. It is especially showy when planted in large groups. To produce the best results it should be severely trimmed every winter in order to induce a quantity of strong young growths.

1 to 2 ft. Cuttings. \$ 25 each \$1 00 per 10 \$6 00 per 100
2 to 3 ft. Trans. 35 " 2 00 " 10 10 00 " 100
6 to 8 ft. " 75 " 5 00 " 10

var. Britzensis. (15 to 20 ft.) A most beautiful Willow for winter use. The shoots are then of a bright flame color. A clump of this, or of any of the colored twigged sorts, makes a striking object in winter. Prune as recommended for the vitellina.

1 to 2 ft. Cuttings. \$ 25 each \$1 00 per 10 \$6 00 per 100
6 to 8 ft. Trans. 75 " 5 00 " 10

Salix, assorted varieties. In addition to the others, we have the following kinds for those who may wish to make collections: *Chlorophylla, cinerea, dasyclados, discolor, hippophæfolia, lucida, Medeni, myricoides, pyrifolia, regalis, Russelliana, serengeana.*

3 to 4 ft. Cuttings. \$ 35 each \$1 50 per 10

SOPHORA.

Sophora Japonica. (25 to 30 ft.) A fine spreading tree, of medium size, bearing panicles of yellowish white flowers early in August. The young wood is of a peculiar dark green color, quite conspicuous in winter.

2 to 3 ft. Seed. \$ 25 each \$1 50 per 10 \$10 00 per 100
3 to 4 ft. " 35 " 2 50 " 10 15 00 " 100

violacea. (25 to 30 ft.) Of the same character as the preceding one, but with violet colored flowers.

4 to 5 ft. Trans. \$ 50 each
5 to 6 ft. " 75 "

Staphylea. (See shrubs.)

Stuartia. (See shrubs.)

TAXODIUM. Deciduous or Bald Cypress.

Taxodium distichum. (40 to 50 ft.) The delicate, feathery foliage of this tree, its rapid pyramidal growth, and beauty when in full foliage, find for it a place in every collection. Though preferring a damp situation, it does not demand it, as many fine specimens are thriving in dry soil in high altitudes. Prune closely when transplanted.

2½ to 3 ft. Trans. \$ 35 each \$2 50 per 10 \$15 00 per 100
5 to 6 ft. " 75 "

var. pendulum. (5 to 6 ft.) A pretty, weeping variety of the above. Grafted on stems five to six feet high.

6 to 8 ft. Trans. \$1 50 each

TILIA. Linden or Lime.

Tilia Americana. American Linden. (50 to 60 ft.) An exceedingly fine large-sized tree, of rapid growth, well suited for broad avenues, parks and public places, where it can develop. It has clusters of small, fragrant, yellow flowers in spring. Will grow in low situations.

6 to 8 ft. Trans.\$ 50 each \$3 50 per 10 \$25 00 per 100
8 to 10 ft. " 1 00 " 7 50 " 10 50 00 " 100
10 to 12 ft. " 1 3/4 in. diam. 1 50 " 10 00 " 10 75 00 " 100

Europæa. European Linden. (35 to 40 ft.) This makes a compact, erect growth, but hardly as large a tree as the preceding. The leaves, while of good size, are not as large as those of the American. A useful tree for street planting.

6 to 8 ft. Trans.\$ 50 each \$3 50 per 10
8 to 10 ft. " 1 00 " 7 50 " 10 50 00 per 100

var. argentea. Silver-leaved Linden. (30 to 35 ft.) A large sized tree, forming a compact, round head. It is of rapid growth, and useful for street and avenue planting, as well as for ornamental purposes. The leaves are green above and silvery beneath, and hold their color late in the fall.

6 to 8 ft. Trans.\$ 75 each \$5 00 per 10
8 to 10 ft. " 1 00 " 7 50 " 10 50 00 per 100

var. aurea.
4 to 5 ft. Trans.\$ 75 each \$5 00 per 10

var. laciniata rubra. (25 to 30 ft.) This is a beautiful and distinct sort. Its cut-leaved feature, and its bright red twigs, are uncommon and interesting. Of medium growth. Useful in ornamental groups.

4 to 5 ft. Trans.\$ 75 each \$5 00 per 10
5 to 6 ft. " 1 00 " 7 50 " 10

var. Parmentieri. Weeping Linden. (10 to 12 ft.) When grafted on tall stems it forms a large, spreading head.

6 to 8 ft. Trans.\$1 25 each

var. platyphylla. Large-leaved Lime. (40 to 50 ft.) This is an upright tree, of fine proportions and rapid growth. The foliage is rather larger than the common Europæa. A fine tree for street planting.

5 to 6 ft. Trans.\$ 50 each \$3 50 per 10 \$25 00 per 100
8 to 10 ft. " 1 00 " 7 50 " 10 50 00 " 100

ULMUS. Elm.

Ulmus Americana. American Elm. (50 to 60 ft.) A tree of lofty growth, and with sweeping, drooping branches. A useful sort for avenue planting.

4 to 5 ft. Trans.\$ 50 each \$3 50 per 10 \$25 00 per 100
9 to 10 ft. " 1 00 " 7 50 " 10 50 00 " 100
10 to 12 ft. " 1 50 " 10 00 " 10 75 00 " 100

campestris. European Elm. (40 to 50 ft.) Makes a very large tree. The foliage is not as large as that of the American, but the growth is more twiggy. Valuable avenue tree.

4 to 5 ft. Trans.\$ 50 each \$3 50 per 10
5 to 7 ft. " 75 " 5 00 " 10

Ulmus campestris monumentalis. (15 to 20 ft.) A slow, columnar growing elm, foliage somewhat appressed to the stem. Distinct.

2 to 3 ft. Trans.\$ 50 each

var. pendula Camperdown Weeping. (6 to 10 ft.) A beautiful object when grafted on tall stems, as it usually is. The branches shoot out almost horizontally. It can be trained to form an arbor if desired.

5 to 6 ft. Trans.\$1 00 each \$7 50 per 10

var. purpurea. Purple Elm. (25 to 30 ft.) While not a deep purple, the color is quite perceptible, and enough to give it value.

2 to 3 ft. Trans.\$ 50 each \$3 50 per 10

crassifolia. (15 to 20 ft.) A Texan species, of but a small size, which has corky branches.

6 to 8 ft. Trans.\$ 75 each

fulva Slippery Elm. (35 to 40 ft.) This makes a good sized tree, and has rather larger leaves than Americana. Makes an open, spreading head. A good street tree.

5 to 6 ft. Trans.\$ 50 each \$3 50 per 10 \$25 00 per 100
12 to 15 ft. " 1 50 " 12 50 " 10

racemosa. Cork Elm. Rock Elm. (30 to 35 ft.) A large growing species, valued for its corky bark, as well as for its fine growth.

6 to 8 ft. Trans.\$ 75 each \$5 00 per 10

sibirica. One of the dwarf, shrub-like elms.

3 ft. Trans.\$ 50 each \$3 50 per 10

sinensis.

3 to 4 ft. Trans.\$ 50 each

ZANTHOXYLUM.

Zanthoxylum franineum. A small sized tree, with pinnate leaves. The umbels of greenish flowers, of no beauty, appear before the leaves.

12 in. Trans.\$ 35 each

piperitum. A Japanese species

3 to 4 ft. Trans.\$ 50 each

ZELKOVA.

Zelkova crenata. An elm-like tree, of small size, not common in cultivation.

18 to 24 in. Trans.\$ 35 each

ZIZYPHUS.

Zizyphus vulgaris. (25 to 30 ft.) A good sized tree, with shining green leaves, and bearing brown berries of the size of marbles. Its prickly stems have led to its being erroneously called Christ Thorn. Its greenish yellow flowers appear towards the close of June.

6 to 8 in. Seed.\$ 25 each \$1 50 per 10

GARDENERS

for this, and would be pleased to answer all correspondence.

Gardeners seeking situations should write to us, and we will be very glad to assist them in securing a good situation. We make no charge for this service.

We have a list of gardeners, capable of filling any position, either as assistants or as Superintendents of large estates, and can recommend suitable persons for those having vacancies to fill. We make no charge

WEEKS & THIEL

Fagus Sylvatica Asplenifolia, Fern-Leaved Beech.—See page 13.

DECIDUOUS SHRUBS.

"SEED" indicates that the stock is in the original seed-beds.

"CUTTINGS" indicates light plants, usually in cutting rows, with from one to three straight stems.

"TRANS." or "TR." indicates medium sized transplanted stock.

"BUSHY" indicates extra heavy transplanted stock.

FIGURES IN PARENTHESIS indicate about the height of the shrub at maturity.

PRICES:—Five shrubs of any one variety and of the same size furnished at the rate per 10. Fifty at the rate per 100. When 250 or more are required, a special price will be given by letter.

SHRUBS SELECTED by customers in the nurseries will be charged for accordingly. When customers do not specify the size or price of the shrub wanted, it must be taken for granted that the selection of a suitable size is left to our judgment.

THE TIME OF FLOWERING named is for the vicinity of Philadelphia.

AMORPHA. Indigo Shrub.

Amorpha canescens. (4 to 5 ft.) A small sized native shrub bearing light purple flowers in June.

12 to 18 in. Trans.....\$ 25 each \$1 50 per 10

" **fruticosa.** (6 to 7 ft.) This species is larger growing than the last, forming a good sized, spreading bush. The indigo colored flowers are in finger-like spikes, three or more spikes in a cluster. They expand the first week in June. It is used largely for massing in parks and on large estates.

2 to 3 ft. Seed.....\$ 25 each \$1 00 per 10 \$7 50 per 100
4 to 5 ft. Trans..... 50 " 3 50 " 10

AMELANCHIER. Snowy Mespilus. June Berry.

Amelanchier Botryapium. (10 to 12 ft.) A quite large shrub, sometimes grown as a small tree. Its flowers are pure white, in loose panicles, expanding at the close of April with the young leaves, and completely covering the tree. Reddish black berries succeed, which are very good eating. Useful as a single specimen or for massing. It will flourish in almost any situation

2 to 3 ft. Seed.....\$ 35 each \$2 00 per 10 \$10 00 per 100

" **var. alnifolia.** (2 to 3 ft.) This does not differ greatly from the above excepting that it is quite dwarf. Little bushes of but two feet flower and fruit freely.

2 to 3 ft. Trans.....\$ 25 each \$1 50 per 10 \$7 50 per 100
3 to 4 ft. " 35 " 2 00 " 10 10 00 " 100

" **var. rotundifolia.** (4 to 5 ft.) Another dwarf bush, in height between the two above named. A most beautiful shrub.

2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10

AMYGDALUS. Flowering Almond.

The long shoots of this shrub are full of double blossoms, about 1 inch in diameter, expanding about the first week of May. See cut opposite.

Amygdalus nana. White.

2 to 2½ ft. Trans.....\$ 35 each \$2 00 per 10

" **nana.** Pink.

2 to 2½ ft. Trans.....\$ 35 each \$2 00 per 10

ANDROMEDA.

The Andromedas are useful for planting in or along the edges of woods, in masses, or with other shrubs of similar character on the lawn,

Andromeda ligustrina. (3 to 4 ft.) A very pretty bush, bearing small bunches of white flowers, towards the close of May.

2 to 2½ ft. Trans.....\$ 50 each \$3 50 per 10

" **Mariana.** (1½ to 2 ft.) A beautiful species, bearing clusters of waxy white flowers along the length of the shoots. The flowers expand the first week in June.

12 to 18 in. Trans.....\$ 35 each \$2 50 per 10

" **racemosa.** (2 to 3 ft.) This blooms early in June. The flowers are in long racemes, waxy white, sweet, appearing on the under side of the racemes.

2½ to 3 ft. Trans.....\$ 50 each \$3 50 per 10

Amygdalus nana. Flowering Almond.

AZALEA MOLLIS, Red and Yellow.

This is a species from China, and is, perhaps, one of the most attractive flowering shrubs introduced from that country. It is of comparative dwarf, bush-like habit, with light green leaves, which are somewhat larger than those of other azaleas.

The flowers are as large as the Indian Azaleas, usually seen in greenhouses, being two and a half to three inches in diameter, and appear in bunches on the ends of the shoots. There are but two colors of it, yellow and red, and they expand about the middle of May.

We know of no other flowering shrub to equal them in attractiveness;

and when massed in a large bed they create a particularly beautiful spot on the lawn.

They are also very effective when planted around the edges of Rhododendron beds, as the dark green leaves of the Rhododendrons make a strong background for the bright colors of the Azaleas. They are also valuable for mixing in beds with the Azalea Pontica, (Ghent Azaleas) as they bloom a little in advance of the others.

We feel particularly fortunate in having secured an extra fine lot of these plants at a low figure, and can offer them to our customers, for this Spring only, at extremely low prices for quantities, until this special lot is all disposed of.

AZALEA.

Azalea aborescens (4 ft.) A large growing "Wood Honeysuckle." Grows to a large sized bush. Its pinkish white flowers appear about June 15th. It can be grown successfully in the woods or in open situations.

"**amœna**. An evergreen species. Leaves small, almost round, dark green, turning almost black in winter. It is a dwarf, compact grower. About the second week in May it is completely covered with claret colored flowers. Besides making a conspicuous specimen plant, it is also used largely for planting around the edges of Azalea and Rhododendron beds.

1 ft. bushy clumps.....\$ 50 each \$4 50 per 10 \$40 00 per 100

"**calendulacea**. (3 to 4 ft.) The lovely flame colored one of the Southern Alleghenies. Blooms about May 25th.

12 to 18 in. Trans.....\$ 35 each \$2 50 per 10
2 to 2½ ft. "..... 50 " 3 50 " 10

"**Mollis**. (Chinese Azalea.) Red or yellow. (2 to 3 ft.)

2 to 2½ ft. Trans.....\$ 75 each \$5 00 per 10 \$35 00 per 100

"**Pontica**, (3 to 4 ft.) The well known "Ghent Azalea." Existing in many colors, hardy and beautiful when in bloom, it is a favorite with planters. It flowers the latter part of May. It is largely used for planting in beds with Rhododendrons or with Azalea Mollis,—in this way making a particularly beautiful showing.

18 to 24 in. Trans.....\$1 00 each \$7 50 per 10 \$60 00 per 100

"**nudiflora** (3 to 4 ft.) Wood Honeysuckle. The beautiful wild one of our woods. The light pink flowers appear about the 15th of May. An elegant shrub for planting in masses or with other shrubs.

8 to 12 in. Trans.....\$ 25 each \$1 50 per 10
12 to 18 in. "..... 35 " 2 50 " 10

"**viscosa**. (3 to 4 ft.) This beautiful species does not produce its sweet scented white flowers until the middle of June, and they do not all come at once. On this account it is largely planted with the other sorts to prolong the flowering season.

12 to 18 in. Trans.....\$ 35 each \$2 50 per 10

BACCHARIS.

Baccharis halimifolia. (3 to 4 ft.) A spreading shrub, native to sandy districts near the sea coast, but thriving well in all situations. In late fall, the white pappus of the fertile plants is quite ornamental. In this condition it very much resembles a cotton plant. Useful for massing.

5 ft. Trans.....\$ 50 each

BERBERIS THUNBERGII.

(Japanese Berberry.)

This is a dwarf, spreading Japanese species, with small, neat foliage and compact, rounded growth. The white flowers appear about the 25th of May, followed by

Berberis Thunbergii, Japanese Berberry.

berries, in great abundance, which towards the close of summer are of a deep scarlet color, and they continue of this color all winter long. The foliage, too, is most brilliant in its autumnal coloring. It is much used for ornamental hedging, and for planting in masses.

BERBERIS. Berberry.

Berberis Thunbergii. Japanese Berberry. (2½ to 3 ft.)

Berberis vulgaris. (4 to 5 ft.) Common Berberry. The pretty yellow flowers of this bush are produced about the 20th of May. It is of erect growth; and its prickly nature fits it for hedging. The berries completely cover the plant, and are of a purplish red color. They remain on the plant nearly all winter.

CARYOPTERIS MASTACANTHUS.

This shrub was introduced to American buyers two years ago, though we have had it in our nurseries for six years past, where we have been thoroughly testing it.

Our experience with it leads us to offer it as one of the best of fall flowering shrubs. The first flowers commence to open about the middle of September; others follow, keeping up the display until the middle of October. They are of a light blue color, and have somewhat the appearance of a Verbenæ. It has been called by some growers the "Blue Spiræa," but this is incorrect, as it does not belong to that family. It is a dwarf grower, rarely exceeding three feet in height, and is admirably

suited for planting on the outer edges of shrubbery beds, or in a group.

In some parts of the country the tops would possibly kill back, but as the flowers are on the growth made the same year of flowering, it does not injure the shrub to lose a portion of its top, in fact it is the better for a little cutting back.

CARYOPTERIS.

Caryopteris Mastacanthus. (2 to 3 ft.) A new shrub, which will be much planted because of its blooming late in the fall, when but few shrubs are in flower. In the axil of each leaf stalk is a bunch of bright blue flowers. It continues in flower from the middle of September to the middle of October. An entire bed of this plant produces a striking effect. One plant postpaid by mail for 35 cents.

CERCIS JAPONICA.

(Japanese Judas.)

After the long winter, we are prone to give even more than their share of admiration to the first Spring flowers: but one that deserves all the encomiums which we can shower upon it is the Japanese Judas. Coming among the very first of the Spring blossoms, the flowers are so abundant, and of such a delicate pink color, that the attention which they attract is, indeed, well-deserved.

Aside from the beauty of the Japanese Judas in the Spring, it is valuable because of its ornamental appearance throughout the Summer, the heart shaped leaves, a glowing green in color, remaining on until late in the Fall.

Where there is only room for a single specimen plant, the Japanese Judas should, above all others, be given the preference. It can also be grouped with other shrubs to advantage, or planted in a mass with good effect; but, in any circumstance, it is that rare find, "a thing of beauty, and a joy forever."

CARPINUS. Hornbeam.

Carpinus Americana. (15 to 20 ft.) A large shrub, often planted for screening or hedging purposes, as it grows thickly and retains its withered leaves all winter, to some extent. When grown to one stem, it makes a small sized, spreading tree. It is found in low, damp ground, but thrives equally as well in high, stony soil.

CHIMONANTHUS.

Chimonanthus praecox. (5 to 6 ft.) A delicately scented yellow flowered shrub, sometimes blooming in March. Not quite hardy North of Philadelphia.

3 to 4 ft. Trans.....	\$ 75 each
-----------------------	------------

CHIONANTHUS. White Fringe.

Chionanthus Virginica. (8 to 10 ft.) One of the most ornamental of shrubs, producing racemes of fringe-like white flowers towards the end of May. Purplish fruit in the fall, hanging like loose bunches of grapes, add to its interest. The leaves are moderately large, dark green, and are quite ornamental. Will thrive in low marshy grounds as well as in higher situations.

12 to 18 in. Seed.....	\$ 25 each	\$1 00 per 10	\$7 50 per 100
2 to 3 ft. Trans.....	35 "	2 50 " 10	
5 ft. "	75 to \$1 50 each		

CHIONANTHUS VIRGINICA.

(White Fringe.)

Though not by any means a new plant, it is still one of the best where a large sized shrub is required. It makes a bush about eight to ten feet in height, and when in full bloom, about the end of May, it is very attractive. The flowers are white, and fringe-like, and completely cover the bush.

Later in the summer the large grape-like berries turn dark purple, and this is an additional attraction.

CLERODENDRON.

Clerodendron foetidum (Bungei.) This bears large heads of rose colored, sweet scented flowers. Though the tops get killed in winter here, it grows freely again from the root, and flowers in August.

2 to 3 ft. \$ 50 each \$3 50 per 10

DEUTZIA.

All the varieties of *Deutzia*, with the single exception of the *gracilis*, make a vigorous, upright growth, with a somewhat compact habit, of about six or eight feet in height. The flowers are in sprays, in some sorts of pure white color, in others, pink. One sort, the *Pride of Rochester*, has white flowers tinged with pink. They are useful shrubs either as single specimens or for planting at the back of shrubby beds.

They bloom about the 10th of June. Although all these *Deutzias* bloom about the same time, we find some are a few days in advance of others. We have found them to expand in the following order:—*Pride of Rochester*, *Scabra*, *Crenata*, *Double White*, *Crenata*, *Double Pink*. (See illustration page 6.)

" *longipes*. (5 to 6 ft.) This has small, yellowish white flowers, in May, followed by berries somewhat larger than currants, which when ripe, towards the close of June, are of a reddish amber color, and are very good for eating fresh or for cooking, besides that the bush is then quite ornamental.

3 to 4 ft. Trans.....	\$ 50 each	\$3 50 per 10
-----------------------	------------	---------------

" *parvifolia*. (6 to 7 ft.) This one is generally understood when "Silver Thorn" is spoken of, though the name applies to all the species. It has sweet scented yellow flowers, in great profusion, in May. The stems are clustered with mottled red berries in July, which, while not equal to those of *longipes* are fairly good eating.

3 ft. Trans.....	\$ 35 each	
------------------	------------	--

" *umbellata (Female)*. (6 to 7 ft.) Although flowering at the same time that the others do, this one does not ripen its fruit until late October. The berries are of the same color as the preceding one. So ornamental are the bushes, when the fruit is ripe, that they are planted especially because of this feature. Only female plants bear fruit.

2 ft. Trans.....	\$ 35 each	\$2 50 per 10
------------------	------------	---------------

GAYLUSSACIA. Huckleberry. Blueberry.

Caylussacia frondosa. (3 to 5 ft.) Blueberry. Bears sweet, bluish berries. All kinds of Huckleberries may be planted in the woods if desired, or in any poor soil, although, of course, the fruit is better when they are planted in good ground.

12 in. Trans.....	\$ 35 each	\$2 50 per 10
-------------------	------------	---------------

" **resinosa.** (2 to 2½ ft.) A low, bushy shrub, growing about two feet high, and producing sweet, black fruit, which ripens in August.

8 to 12 in. Trans.....	\$ 35 each	\$2 50 per 10
------------------------	------------	---------------

GENISTA. Scotch Broom.

Genista scoparia. (5 to 6 ft.) To the casual observer, this shrub appears to have no leaves, as, being so few and small, they are not particularly noticeable. The stems and branches are of a bright green color, standing in strong contrast to other plants. The flowers are yellow, pea-shaped, and completely cover the plant, opening during the last days of May. North of Philadelphia, it requires some protection, and even here it is sometimes partially winter-killed, though rarely enough to prevent its blooming the succeeding summer. It is useful for planting in masses, in sheltered positions. In Europe it is used as game-covers. Requires severe pruning when transplanted.

12 to 24 in. Seed ..	\$ 25 each	\$1 50 per 10	\$ 7 50 per 100

Halesia tetraptera, Silver Bell

HAMAMELIS. Witch Hazel.

Hamamelis Virginiana. (6 to 7 ft.) This looks a great deal like a common hazel in leaf and growth. It is peculiar because of producing its small yellow flowers late in fall, just before frost comes. It is used largely by planters for growing in masses along the edges of woods or where it is desired to produce a wild or natural effect.

2 to 3 ft. Seed.....	\$ 35 each	\$2 00 per 10	\$10 00 per 100
3 to 4 ft. "	50 "		

HIBISCUS. ALTHÆA. Rose of Sharon.

Hibiscus Syriacus. Rose of Sharon. (6 to 8 ft.) These are extremely useful shrubs, blooming in great profusion at a season of the year when but few shrubs flower. The diversity of color in the different sorts makes it possible to use them in larger quantities in small places than would otherwise be the case. They are so well-known that they need no description, every gardener in the country possessing one or more of them. They make very pretty flowering hedges, and by trimming them in the winter only—never in the summer—it does not prevent their flowering, as is the case with nearly all other flowering shrubs. (Read pruning of "Flowering Shrubs," page 6.)

HIPPOPHÆ. Sea Buckthorn.

Hippophæ rhamnoides. (5 to 6 ft.) A half spiny shrub, with silvery leaves, and bearing small white flowers. A good shrub for planting at the sea shore.
 2½ to 3 ft. Trans.....\$ 35 each \$2 00 per 10 \$10 00 per 100

HYDRANGEA PANICULATA GRANDIFLORA.

(Japanese Hydrangea.)

This shrub is now so well-known that it requires no description. Everywhere it is seen, either as a single specimen or in large beds.

While as a single specimen it makes the most conspicuous flowering shrub in late summer and fall, yet when planted together in quantities in a large bed it has an effect that no other shrub in masses produces,—one great mass of snow white flowers. Each head being so large, it makes the effect more striking than would otherwise be the case.

It is planted in great numbers at Newport, and attracts a great deal of admiration at that well-known place. It should be pruned to the ground every winter as it is desirable to prevent the plant from growing too tall,—and it will bloom as profusely and in fact make larger heads of bloom than if left unpruned. A bed of one hundred makes a most striking appearance.

We particularly call your attention to the low price we are offering this shrub,—we grow it in immense quantities, consequently we are able to offer only the very best stock

HYDRANGEA.

Hydrangea arborescens. (4 to 5 ft.) A native sort, bearing corymbs of white flowers about the close of June.

PYRUS ARBUTIFOLIA.

(Choke Berry.)

This is a Native Shrub, and it is very ornamental, both in spring and fall.

It makes a fair sized shrub, of rather open growth, with pretty, dark green leaves.

The flowers are white, of rather small size, but are borne in bunches all along the stems of the one year old wood. They appear in such abundance as to entirely

envelop the bush,—about the second week in May. The flowers are followed by bright red berries, as shown in the illustration, which remain on the plant almost all winter. This is one of the features that make this plant so desirable. Then, too, it will thrive in comparatively poor soil,—in the woods or in somewhat low ground. When planted in masses it makes a gorgeous effect in fall and winter when covered with these bright red berries.

There is more attention paid to the planting of shrubs with pretty berries than there used to be, so as to have showy bushes in the autumn and winter months. Many shrubs are really more ornamental when in fruit than when in flower. *Pyrus arbutifolia* is admirable at both periods. Its beautiful sprays of white flowers lead many to think they are looking on an *Amelanchier* bush.

Though of dwarf, bush-like growth naturally, it can be trained to a single stem if required, and in this shape will make a height of 8 to 10 feet, and show off its flowers and fruit to great advantage.

ROSA RUGOSA.

(Japanese Rosé.)

There are two sorts of this beautiful rose, a red and a white flowered one. Because of their large single flowers, hardiness, vigorous growth and dark green foliage, they are more largely planted than any other kind to-day. Indeed, the vigorous, beautiful foliage is thought to be merit enough by many persons. The flowers are shell-like in formation, and are followed by haws or berries which, when ripe, are of a deep red color, and in size are as large or larger than an ox-heart cherry. These berries are conspicuous until quite late in autumn.

The flowers, however, are the chief feature, as may be inferred from the illustration. They are often four to five inches in diameter.

They are largely planted as single specimens, but when planted as they are at Newport, R. I., in masses ten, fifty, or one hundred together, the effect is magnificent.

We are fortunate in possessing an extra fine lot of these plants in the two colors, and it will be noticed how low the price is; lower, we think, than this class of stock has ever been offered before.

Prices as follows only until the stock is disposed of: 2 ft. trans., 35 cents each; \$2 50 per 10; \$15.00 per 100. One plant by mail 50 cents, one of each color for 75 cents.

The number required may be of one sort only or made up from both.

ROSA. Rose.

Rosa arvensis. (3 to 4 ft.) A European rose, bearing its single white flowers about the close of May.

2 to 3 ft. Seed..... \$ 35 each \$2 00 per 10 \$10 00 per 100

" **Ayreshirea.** (3 to 4 ft.) A single white rose, blooming in May.

HARDY CLIMBING ROSES.

New Climbing Rose "Crimson Rambler." So well-known is this rose now that it is scarcely necessary to do more than catalogue its name; for it is undoubtedly the best climbing rose extant. It is a most prodigious bloomer,—the trusses of bright crimson flowers frequently measuring a foot or more in length. It is an extremely rapid grower, and small plants set out now will make a strong growth the coming summer and bloom profusely the following year.

From 3-inch pots 25 cents each. \$2 00 per 10. Extra strong field grown plants, 50 cents each. \$3 50 per 10.

Baltimore Belle. Flowers in large clusters; an old variety, but still one of the best. Color, white, changing to light rose and carmine.

Strong plants from pots, 35 cents each. \$2 50 per 10

Prairie Queen. A strong and rapid growing rose. Large, compact and globular flowers in clusters. Color, bright rosy red.

Strong plants from pots, 35 cents each. \$2 50 per 10

COPYRIGHTED 1895 BY A. BLANC
New Climbing Rose "Crimson Rambler."

LORD PENZANCE'S HYBRID SWEET BRIERS.

These lovely hybrids, apart from their extreme beauty, are most interesting, being crosses between the common Sweet Brier and various other Roses such as Austrian Brier, varieties of Gallica, etc. It is certain they are a great acquisition. Like their parent, the common Sweet Brier, the foliage is deliciously scented. The flowers are of the most beautiful tints and produced in great profusion. Not the least of their recommendations is the fact that they are perfectly hardy even in the coldest situations, and possess a robust vigor which is quite astonishing, bushes four or five years old throwing up shoots of ten, twelve, and even fifteen feet high; these when covered with flowers of the most delicate shades, have a most gorgeous effect.

Amy Robsart. Lovely deep rose, the buds before opening are most graceful, of true Sweet Brier type.

Anne of Ceierstein. Dark crimson, followed by an abundance of pretty clustered bunches of hips, branching habit.

Brenda. Maiden's blush or peach, dainty in color and shade, the contrast and effect of the bright golden anthers add peculiar charm to this variety.

Flora M'Ivor. Pure white blushed rose, perfect for cutting, large flowers, graceful in growth and habit; a gem.

Lucy Ashton. Pretty white blooms with pink edges, not so large as some others, wonderfully free flowering; free grower with rather erect shoots, foliage as sweet as the old *Sweet Brier*.

Lady Penzance. Beautiful soft tint of copper with a peculiar metallic lustre, the base of each petal is a bright yellow, very free flowering, with a delicious perfume from foliage and flower, a wonderful grower, shoots pendulous.

Lord Penzance. Soft shade of fawn or écrue passing to a lovely emerald yellow in the centre, sometimes toned with a most delicate pink, a good grower and abundant bloomer, very sweet scented.

Meg Merrilees. Gorgeous crimson, very free flowering, seeds abundantly, one of the best.

Rose Bradwardine. Beautiful clear rose, perfect in shape; very profuse, strong, robust habit.

Strong field grown plants..... 50 cents each \$3 50 per 10
From 2½ in. pots 35 " " 2 50 " 10

NEW HYBRID WICHURAIANA ROSES.

It is for the first time that hybrids of this very useful hardy rose are offered. They have been a great surprise to everyone who has seen them.

They keep the same trailing habit, and the same fine green foliage lasting well into January, and the same freedom of growth as the parent form, some of them having made from a small cutting plant a shoot eighteen feet eight inches last season, and are therefore well adapted for covering bare spaces on the ground, or for trailing purposes, for which they are invaluable.

As to flowers, they produce innumerable quantities of large well-formed blooms lasting a long time in perfection, and flowering with such a freeness that no rose can equal it; so that a two or three year old plant can be fairly counted to produce a thousand or more flowers, and thus be a sight that can hardly be described.

As to hardiness, they have stood the severe winter of '95-'96 on a very exposed and bleak situation, without any covering whatever and have flowered beautifully the coming Spring. They are not particular to any soil, but will grow even on the poorest sandy and gravelly banks, for which they are well adapted. Not only for these purposes, but also as a pot-plant either to force early in the Spring, or to let come naturally, it is first-class.

The variety named "Manda's Triumph" is well adapted for pot-culture, as it is literally covered with a fine double white flower for several weeks. Taking them all in all, the set of four varieties represent a collection that should be in every garden, and surely will prove as valuable as the celebrated "Crimson Rambler."

Manda's Triumph. This is a grand hybrid of free growth, with fine foliage, and clusters of from twelve to eighteen flowers on even a small side shoot, literally covering the plant with its perfectly formed double white flowers, nearly two inches across, beautifully imbricated; a valuable sort either for cut-flowers or pot plants. It is also very sweet scented—a valuable variety for florists.

Universal Favorite. A free grower, producing long branching shoots, with bright shiny foliage in abundance, and soft light pink double flowers, two inches in diameter, strongly perfumed.

South Orange Perfection. This is a gem, with free growth close to the ground, and multitudes of the most perfectly formed double white flowers, about one-and-a-half inches in diameter, soft blush pink at the tips, changing to white

Pink Roamer. This is without question a hybrid between the "Sweetbrier" and carries these characteristics in bloom, while the growth, which is very rampant, partakes more of the "Wichuriana." The single flowers, which are produced in close heads, are nearly two inches in diameter, bright rich pink, with almost a white centre, which lightens up the orange red stamens, producing an effect, which, combined with the fragrance, makes it one of the most valuable roses in cultivation.

Plants will be delivered 1st of March, 1897.

Prices, 2 inch in pots, 60 cents each; \$2 00 the set of four varieties; \$6 00 per dozen.

RUBUS. Flowering Bramble.

Rubus fruticosus. Double Flowering Bramble. (Creeping.) This bears double white flowers towards the close of June.

SPIRÆA ANTHONY WATERER.

This beautiful variety of the well known Spiræa Buma'da called forth our admiration on seeing it at the home of the originator, in Europe, last season. In habit of growth it is the same as its parent, growing about 2 to 3 feet in height, and making a shapely bush. The heads of flowers are almost as broad again as the older kind, and are of a deep pink color.

It blooms about the close of June, and if the flowers are cut off as fast as they commence to decay, there will be a continuance of them throughout the season, to some extent.

It is useful for edging shrubbery beds, planting in masses, or as a single specimen where a low, bushy flowering shrub is required.

One plant, by mail, 35 cents.

SPIRÆA.

Spiræa arifolia. (3 to 4 ft.) A very fine, small leaved sort, from the Pacific coast. It bears a profusion of greenish white flowers, towards the close of June, in large clusters.

" **paniculata.** (3 to 4 ft.) A very good sort, bearing compressed panicles of pink flowers at the close of June.

3 to 4 ft. Trans..... \$ 35 each \$2 00 per 10

" **prunifolia.** Bridal Wreath. (4 to 5 ft.) The pretty double white flowers are in bunches of twos and threes all along the almost leafless stems. They usually expand about May 1st, just as the leaves are budding. See illustration.

18 to 24 in. Trans.....\$ 25 each \$1 50 per 10 \$ 8 00 per 100
4 ft. " 35 " 2 00 " 10

" **Reevesii.** (Single.) (3 to 4 ft.) The beautiful clusters of white flowers appear about the 20th of May.

2 ft. Trans.....\$ 25 each \$1 50 per 10 \$ 8 00 per 100
3 to 4 ft. " 35 " 2 00 " 10 10 00 " 100

" **Reevesii.** (Double) (3 to 4 ft.) The same as the preceding, but with double flowers, which open a few days later. Both are compact in their habit and have slim twigs and branches.

2 ft. Trans.....\$ 25 each \$1 50 per 10 \$ 8 00 per 100
3 ft. " 35 " 2 00 " 10 10 00 " 100

" **Regeliana.** (4 to 5 ft.) The dense panicles of pink flowers appear about the close of June. Then from young shoots of the same season there is often a fresh crop of flowers in late summer.

3 to 4 ft. Trans.....\$ 35 each \$2 00 per 10

" **rotundifolia.** (3 to 4 ft.) This has clusters of white flowers in June. The leaves are round and of dark green color.

2 ft. Trans.....\$ 35 each \$2 00 per 10 \$10 00 per 100

" **salicifolia.** (4 to 5 ft.) The flowers are white, in panicles, and expand toward the end of June.

3 ft. Trans.....\$ 35 each \$2 00 per 10

" **sorbifolia.** (4 to 5 ft.) This produces spikes of fuzzy white flowers, opening towards the close of June.

4 ft. Trans.....\$ 35 each \$2 00 per 10

Spiræa Thunbergii. (3 to 4 ft.) This has single white flowers, in bunches of two to four, along the almost leafless stems, generally in the first days of May. The leaves are narrow and of light green color. It is very graceful in appearance, the branches being somewhat drooping.

1 ft. Trans.....\$ 25 each \$1 50 per 10 \$ 8 00 per 100
3 ft. " 35 " 2 00 " 10

" **tomentosa.** (3 to 4 ft.) The flowers are pink, in panicles, appearing in mid-summer.

2½ ft. Trans.....\$ 35 each \$2 00 per 10

" **vaccinifolia.** (3 to 4 ft.) White. Blooms in June.

3 to 4 ft. Trans.....\$ 35 each \$2 00 per 10

" **Van Houttei.** (4 to 5 ft.) A very good kind, bushy and hardy, like Reevesii, but perhaps better. The flowers are white, in bunches, and appear in great quantities about the middle of May.

2 ft. Trans.....\$ 25 each \$1 50 per 10 \$ 8 00 per 100
3 ft. " 35 " 2 00 " 10 10 00 " 100
4 ft. " 50 " 3 50 " 10 15 00 " 100

Spiræa prunifolia, Bridal Wreath.

STAPHYLEA. Bladder Nut.

Staphylea Colchica. Asiatic Bladder Nut (8 to 10 ft.) This is of shrub-like growth, producing clusters of white flowers, which are much admired. Flowers in late May.

3 to 4 ft. Trans.....\$ 35 each \$2 00 per 10
4 to 5 ft. " 50 " 3 50 " 10

" **trifolia.** American Bladder Nut. (8 to 10 ft.) The flowers are not as conspicuous as the other, but still are beautiful. They appear towards the close of June.

2 ft. Seed.....\$ 25 each \$1 50 per 10
5 to 6 ft. Trans..... 50 " 3 50 " 10

STEPHENANDRA.

Stephenandra flexuosa. (3 to 4 ft.) A compact growing shrub, with small, hawthorn-like leaves, and bearing bunches of small white flowers in early June.

12 to 18 in. Trans.....\$ 35 each \$2 00 per 10 \$10 00 per 100
3 ft. " 50 " 3 50 " 10 20 00 " 100

STUARTIA.

- Stuartia pentagyna.** (6 to 7 ft.) One of the most beautiful of native shrubs, bearing good sized single white flowers, with yellow stamens. The flowers appear about the middle of July.
2 to 3 ft. Trans.....\$ 50 each \$3 50 per 10
- " **Virginica.** This blooms in mid-June, producing lovely white flowers with purple stamens.
18 to 24 in. Trans.....\$ 50 each \$3 50 per 10

Styryx Japonica.

STYRAX.

- Styryx Japonica.** (8 to 10 ft.) A very valuable large shrub. The branches are loaded with white flowers on long stems, which all hang downwards. As it gets six to eight feet high before blooming, a fine display appears when the flowers expand. They open early in June. It makes an excellent small sized tree, suitable for planting in small yards or cemetery lots,—the flowers make it particularly useful for this purpose.
3 ft. Seed.....\$ 50 each \$3 50 per 10

SYMPHORICARPUS. Snowberry.

- Symphoricarpus racemosus.** White Fruited Snowberry. (3 to 4 ft.) This shrub is very much valued for its white berries in the fall. It is very ornamental when planted in masses.
2 to 2½ ft. Trans.....\$ 35 each \$2 00 per 10 \$10 00 per 100
- " **vulgaris.** (3 to 4 ft.) This one bears red berries, which, though not as large as those of the other one, are more thickly clustered along the stems. It is also much used in large plantings.
2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10 \$10 00 per 100
- " **var. variegatus.** (3 to 4 ft.) Of the same character as the last, but with variegated leaves.
2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10

SYRINGA. Lilac.

- Syringa Emodi.** (5 to 6 ft.) This species differs from the garden lilac. It has large, shiny foliage, and loose heads of whitish flowers. It blooms in early June, and is particularly useful on this account; other lilacs being out of flower then.
2 ft. Trans.....\$ 25 each \$1 50 per 10
3 ft. ".....35 " 2 00 " 10
- " **Japonica.** (8 to 10 ft.) Popular because of its very large heads of privet-like flowers, which appear in June.
2 ft. Trans.....\$ 35 each

Syringa Josikæa. (5 to 6 ft.) Resembling Emodi a good deal, but this one has dark lilac-colored flowers. It blooms the first week in June. It is distinct and valuable.

2 ft. Trans.....\$ 35 each \$2 00 per 10
3 to 4 ft. ".....50 " 3 50 " 10

" **ligustrina.** (8 to 10 ft.) This is one of the lilacs with privet-like heads of white flowers, not of the old garden lilac type, but still quite desirable. It blooms in open heads in the first week in June.

5 to 6 ft. Trans.....\$ 35 each \$2 00 per 10

" **oblata.** (4 to 5 ft.) An early flowering, light purple species, with large, round, dark green leaves.

18 to 24 in. Trans.....\$ 25 each \$1 50 per 10
2 to 2½ ft. ".....35 " 2 00 " 10

" **Pekinensis pendula.** (5 to 6 ft.) A drooping form of the privet-flowered section, which makes a pretty object when grafted on tall stems.

8 to 9 ft. Trans.....\$1 00 each \$7 50 per 10

" **Persica.** Persian Lilac. (7 to 8 ft.) The slender growth and profuse blooming of this sort make it most desirable. The flowers are light purple and are in open heads, completely covering the bush. The habit is more open than that of the common lilac.

2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10 \$10 00 per 100
3 to 4 ft. ".....50 " 3 50 " 10

" **var. alba.** (7 to 8 ft.) Of the same habit as the preceding one, but with whitish lilac flowers.

12 to 18 in. Trans.....\$ 25 each \$1 50 per 10
3 to 4 ft. ".....50 " 3 50 " 10

" **rothomagensis.** (7 to 8 ft.) Differing but little from Persica, but perhaps the flowers are more of a reddish purple.

2 to 2½ ft. Trans.....\$ 35 cents \$2 00 per 10 \$10 00 per 100
3 to 4 ft. ".....50 " 3 50 " 10

" **vulgaris.** (8 to 10 ft.) This, and the varieties below mentioned, are the true old garden lilacs. This one is the common purple, and, as with all its varieties, it blooms about the second week in May.

12 to 18 in. Trans.....\$ 25 each \$1 00 per 10 \$7 00 per 100
4 ft. ".....35 " 2 00 " 10 10 00 " 100
5 ft. ".....75 to \$1 50 each

" **var. alba.** (8 to 10 ft.) The white form of the common Lilac.

18 to 24 in. Trans.....\$ 25 each \$1 00 per 10 \$7 00 per 100
4 ft. ".....35 " 2 00 " 10 10 00 " 100

" **var. Amethystine.** (6 to 7 ft.)

2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10

" **var. Charles X.** (6 to 7 ft.) Purple, with reddish tint.

18 to 24 in. Trans.....\$ 25 each \$1 50 per 10

" **var. Dr. Stockhardt.** White.

18 to 24 in. Trans.....\$ 25 each \$1 50 per 10

" **var. Cloire de Moulins.** Purplish Rose, large flower.

2 ft. Trans.....\$ 35 each \$2 00 per 10

" **var. Leon Simon.** (6 to 7 ft.) Panicle compact. Flowers bluish lilac. Double.

2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10

" **var. Louis Spath.** (6 to 7 ft.) Dark Reddish Purple.

2 ft. Trans.....\$ 35 each \$2 00 per 10

" **var. Marie Legraye.** (3 to 4 ft.) Large white flowers and large panicles. A very dwarf sort.

2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10 \$10 00 per 100

" **var. Mathieu de Dombasle.** (6 to 7 ft.) Double reddish purple.

3 to 4 ft. Trans.....\$ 50 each \$3 50 per 10

" **var. M. Lemoine.** (6 to 7 ft.) Reddish purple large.

2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10

" **var. plena.** (7 to 8 ft.) Double dark lilac, blooms a day or two in advance of the others,

3 ft. Trans... ..\$ 35 each \$2 00 per 10

" **var. Princess Marie.** (6 to 7 ft.) Purple.

2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10
3 to 4 ft. ".....50 "

- Syringa vulgaris, Professor Sargent.** (6 to 7 ft.) Cherry red in bud, dark violet when fully opened.
18 to 24 in. Trans.....\$ 35 each \$2 00 per 10
- " **var. pyramidalis.** (6 to 7 ft.) Fine rosy purple. Upright in growth. Double fine.
2 ft. Trans.....\$ 35 each
- " **var. rubella fl. plena.** Large, double clear, red, good.
18 to 24 in. Trans.....\$ 35 each \$2 00 per 10
- " **var. rubra de Marley.** (6 to 7 ft.) Dark lilac. A good sort.
3 to 4 ft. Trans\$ 35 each \$2 00 per 10
4 to 5 ft. " 50 " 3 50 " 10
- " **var. rubra insignis.** (6 to 7 ft.) Rosy purple. Very good. Dark red in bud, the best of all.
2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10
4 to 5 ft. " 50 " 3 50 " 10
- " **var. Senator Vollard.** (6 to 7 ft.) Rosy red. Double, fine.
3 ft. Trans\$ 35 each \$2 00 per 10
- " **villosa.** (5 to 6 ft.) A Japanese species, with large branching panicles, flowers light purple in bud, white when open. Blooms late in May.
3 ft. Trans\$ 35 each \$2 00 per 10

TAMARIX. Tamarisk.

- Tamarix Africana (tetrandra.)** (7 to 8 ft.) The leaves of all the Tamarix are very small. This sort has light pink flowers, which appear towards the close of May. The Tamarisk thrives well at the sea shore.
2 to 3 ft. Cuttings.....\$ 35 each \$1 50 per 10 \$10 00 per 100
4 to 5 ft. Trans..... 50 " 3 50 " 10 20 00 " 100
- " **Callica.** (7 to 8 ft.) Resembles the preceding a great deal, and blooms about the same time.
2 to 3 ft. Cuttings.....\$ 35 each \$1 50 per 10 \$10 00 per 100
4 to 5 ft. Trans..... 50 " 3 50 " 10
- " **Indica.** (7 to 8 ft.) All the species are alike in foliage to a great extent, but this one blooms in August; the flowers are pale rose.
2 to 3 ft. Cuttings.....\$ 35 each \$1 50 per 10
- " **Japanica plumosa.** (7 to 8 ft.) There is some little variation in the foliage and habit of growth of this one, and, like the preceding one, it blooms in August.
18 to 24 in. Cuttings.....\$ 25 each \$1 00 per 10

VACCINIUM. Huckleberry.

- Vaccinium corymbosum.** Blueberry. (3 to 4 ft.) This has bunches of white flowers in May, followed by edible fruit in August. It grows to a large sized shrub, and in the autumn its foliage changes to a deep scarlet.
12 in. Trans.....\$ 35 each \$2 00 per 10
- " **Pennsylvanicum.** (2 to 3 ft.) A low-growing huckleberry, making but a small bush. Its berries are sold in market in large quantities in the fall.
10 in. Trans.....\$ 35 each \$2 00 per 10
- " **vacillans.** (2 to 3 ft.) Not differing much from the preceding species.
8 to 10 in. Trans\$ 35 each \$2 00 per 10

VIBURNUM.

- Viburnum acerifolium.** Maple-Leaved. (4 ft.) A low-growing shrub, bearing flat heads of white flowers, in late May, followed by clusters of black berries in fall. A good variety for growing in masses, in the woods or in shaded places.
18 to 24 in. Trans.....\$ 25 each \$1 50 per 10 \$10 00 per 100
2 to 3 ft. " 35 " 2 00 " 10
- " **cassinoides.** (4 to 5 ft.) The green leaves and the flat heads of white flowers constitute pleasing features in this shrub. It blooms in June and bears black-colored berries in the fall.
18 to 24 in. Trans.....\$ 35 each \$2 00 per 10
- " **cotinifolium.** A large-growing, desirable shrub, producing corymbs of white flowers early in May, followed by berries which become pink, red and black in turn as they ripen. Useful either as a single plant or in groups.
2 to 3 ft. Seedlings\$ 25 each \$1 50 per 10 \$10 00 per 100
3 ft. Trans..... 35 " 2 00 " 10

- Viburnum dentatum.** (4 ft.) A bushy sort, very pretty when its white flowers expand in early June. The berries which follow change to a black color when ripe.
2 ft. Trans.....\$ 35 each \$2 00 per 10
3 to 4 ft. " 50 " 3 50 " 10

- " **Lantana.** A valuable species, greatly resembling continifolium, but with smaller foliage.

- 18 to 24 in. Trans.....\$ 25 each \$1 50 per 10 \$10 00 per 100
3 ft. " 35 " 2 00 " 10

- " **macrocephalum.** (4 to 5 ft.) This blooms about the 20th of May. The flowers are in flat heads; the outside flowers are of good size, the inner ones much smaller.
12 to 18 in. Trans.....\$ 35 each

- " **nepalense.** (5 to 6 ft.) A strong grower, foliage large, and the bush of compact form. Flowers are white and come in early June.
2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10 \$12 00 per 100
4 ft. " 50 " 3 50 " 10

- " **oxycoccus.** High-bush Cranberry. (4 to 5 ft.) Flowers in large, flat heads in the latter part of May. The outer flowers are of good size, the inner ones quite small. In the fall it is full of bright red berries.
18 to 24 in. Trans.....\$ 25 each \$1 50 per 10 \$10 00 per 100
2 to 3 ft. " 35 " 2 00 " 10

- " **Opulus sterilis.** Common Snowball. (6 to 7 ft.) This well-known shrub finds great favor with planters. The large balls come singly, hanging by stems along the branches, expanding towards the close of May, a little in advance of the Japanese.
18 to 24 in. Trans.....\$ 25 each \$1 50 per 10 \$8 00 per 100
2½ to 3 ft. " 35 " 2 00 " 10 10 00 " 100
5 ft. " 50 " 3 50 " 10

- " **var. nana.** (1 to 2½ ft.) This is a veritable dwarf variety, growing very bushy, but with little disposition to flower.
12 to 15 in. Trans.....\$ 35 each \$2 00 per 10

- " **phlebotrychium.** Bears flat heads of white flowers, which expand in early June.
2 ft. Trans\$ 35 each \$2 00 per 10

- " **plicatum.** (6 to 7 ft.) Japanese Snowball. (See Colored Plate.) One of the best of shrubs. Of upright bushy growth, entire leaves, and bearing heads of white flowers in great profusion, it stands unrivalled among shrubs. Much superior to the old snowball. It blooms towards the close of May. One plant by mail for 35 cents.
18 to 24 in. Trans.....\$ 25 each \$1 50 per 10 \$10 00 per 100
2½ to 3 ft. " 35 " 2 00 " 10 15 00 " 100
4 to 5 ft. " 50 " 3 50 " 10 20 00 " 100
5 to 6 ft. Bushy specimens 75 to \$1 00 each.

- " **var. rotundifolium.** (6 to 7 ft.) This is a round leaved variety of the last named. It blooms a week in advance of the other. The individual flowers which make up the ball are rather larger than the type, and the leaves turn to a beautiful bronze and purple color in fall.
2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10
5 ft. " 50 " 3 50 " 10

- " **prunifolium.** Sheepberry. (5 to 6 ft.) A large growing shrub, bearing flat clusters of white flowers about the 15th of May, followed by black fruit in the fall.
2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10

- " **Sieboldi (reticulatum.)** (7 to 8 ft.) This bears clusters of white flowers about May 20th. The leaves are very large, heavy, and dark green. It may be an evergreen in the South. It makes almost a small tree. A most desirable plant, especially when grown singly as a specimen.
2 ft. Trans.....\$ 35 each \$2 00 per 10 \$12 00 per 100
4 to 5 ft. " 75 " 5 00 " 10

- " **var. variegatum.** (7 to 8 ft.) This variety of the preceding sort differs in having variegated leaves.
2 ft. Trans\$ 50 each

VITEX. Chaste Shrub.

- Vitex agnus-castus.** (3 to 4 ft.) This is a valuable shrub because of its flowering in August and September when but few shrubs are in bloom. The flowers are in loose panicles, lilac in color
18 to 24 in. Trans.....\$ 25 each \$1 50 per 10
3 ft. " 35 " 2 00 " 10
- " **var. alba.** (3 to 4 ft.) White flowers.
2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10

Vitex agnus-castus caerulea. Flowers blue.
2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10

Vitex Agnus-Castus.

WEIGELA.

Weigela amabilis. (4 to 5 ft.) A medium sized bush, the flowers of which are almost white. It blooms towards the close of May.

12 to 18 in. Cuttings.....\$ 25 each \$1 25 per 10 \$7 00 per 100
2 ft. Trans..... 35 " 2 00 " 10

2 ft. Trans..... 35 " 2 00 " 10

" **arborea versicolor.** (4 to 5 ft.) This is the first to flower of our collection. Its dark, rose-colored blossoms expand about the 20th of May.

3 to 4 ft. Trans.....\$ 35 each \$2 00 per 10
4 to 5 ft. " 50 each 3 50 " 10

" **candida.** (4 to 5 ft.) A tall grower, the flowers creamy white, blooming at the close of May.

2 ft. Trans.....\$ 35 each \$2 00 per 10 \$10 00 per 100

" **Desboisii.** (5 to 6 ft.) A tall grower, with stiff shoots. The flowers are of a dark rose.

3 to 4 ft. Trans.....\$ 35 each \$2 00 per 10

" **floribunda.** (4 to 5 ft.) This fine crimson-flowered one blooms towards the close of May. The white stamens projecting from the flowers are quite a feature.

2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10 \$10 00 per 100

" **Croenewegenii.** (5 to 6 ft.) One of the vigorous, tall growers. The flowers are dark rose.

3 to 5 ft. Cuttings.....\$ 35 cents \$2 00 per 10
4 to 5 ft. Trans..... 50 " 3 50 " 10

" **rosea.** (3 to 4 ft.) The first known, and perhaps the most esteemed of all. It forms a well proportioned shrub, and bears its rose-colored flowers in great profusion towards the close of May.

18 to 24 in. Trans.....\$ 35 each \$2 00 per 10 \$10 00 per 100

WEIGELA FLORIBUNDA.

(Crimson Weigela.)

This is a variety introduced by us a few years ago, and it is still the only good one of its color.

It is a strong grower, blooming freely about the end of May, and frequently again in the fall, though not as profusely as in the spring.

The flowers are claret colored, the stamens which project from the flower are white, making a conspicuous contrast.

XANTHOCERAS.

Xanthoceras sorbifolia. (5 to 6 ft.) A very popular new shrub. The flowers are white, with crimson centre, and expand about the middle of May. It should be severely pruned when transplanted.

2 to 3 ft. Trans.....\$ 35 each \$2 00 per 10
3 to 4 ft. " 50 " 3 50 " 10

ZANTHORHIZA.

Zanthornhiza apiifolia. (2 to 3 ft.) A native shrub, of low growth, bearing racemes of plum-colored, small flowers early in May.

Abies excelsa, Norway Spruce.
(From a photograph of our four and five feet bushy plants offered on page 45.)

EVERGREENS.

"SEED" indicates that the stock is in the original seed-beds.

"BUSHY" indicates extra heavy stock.

FIGURES IN PARENTHESIS indicate about the height of the plant at maturity.

PRICES:—Five evergreens of any one variety and of the same size furnished at the rate per 10. Fifty at the rate per 100. When 250 or more are required a special price will be given by letter.

It should be remembered that the height does not indicate the value of the tree. If, as frequently is the case, a tree is very dense

and spreading its value is greater than a slim tree of the same height. Customers may depend upon us to select plants of full value for the price charged.

Evergreens selected by customers in the nurseries, will be charged for according to their value. When customers do not specify the size or price of the evergreen wanted, it must be taken for granted that the selection of a suitable size is left to our judgment.

ABIES. (PICEA.) Spruce.

(See also Picea, page 48.)

Botanical authorities generally agree that what have been called Abies should be Picea, and vice versa, but we continue the names under which our customers have known the trees.

Abies alba White Spruce. (25 to 30 ft.) A native tree of medium size, forming naturally a close, pyramidal growth, and having blue-gray tinted foliage, which is much admired.

3 ft. Trans. \$1 25 each \$10 00 per 10

PODOCARPUS. Japan Yew.

Podocarpus Japonica. (1 to 5 ft.) An erect, slow growing evergreen, not unlike the Irish Yew, but with broader leaves.

18 to 24 in. Trans. \$ 50 each \$3 50 per 10

Retinispora squarrosa.

(From a photograph of one of our four and five feet specimen plants.)

RETINISPORAS. Japanese Cedar.

Botanical authorities make all varieties of *Retinisporas* as belonging to one or the other of two species, *Obtusa* and *Pisifera*. Originating as they did in Japan, it is almost impossible to say certainly to which one to refer any kind, so we list them under the names we received them. *Retinisporas* are useful for planting as specimens or in groups when evergreens of medium size are needed. They should be sheared every two years in order to keep them compact and to secure the best color in foliage. All are useful for planting in evergreen beds.

Retinispora ericoides. Heath Leaved. (2 to 2½ ft.) A dwarf, compact grower, the foliage of which changes to iron color in winter.

6 to 8 in. Trans.....\$ 35 each \$2 00 per 10

filifera. (15 to 20 ft.) This has slender, string-like, drooping shoots. Quite distinct from any other. It makes a unique specimen evergreen.

10 to 12 in. Trans.....\$ 35 each \$2 00 per 10

var. aurea. (15 to 20 ft.) A golden form of the above.

8 to 10 in. Trans.....\$ 50 each \$3 50 per 10

leptoclada. (4 to 5 ft.) This grows in an upright form, as Junipers do. In the fall and winter its green color gives way to an iron one.

2 to 2½ ft. Trans.....\$ 75 each \$5 00 per 10

lycopodoides. (3 to 4 ft.) The foliage of this is much compressed, making it a desirable curiosity. It requires yearly pruning to keep it in good form.

10 to 12 in. Trans.....\$ 35 each \$2 00 per 10

obtusa compacta. (2½ to 3 ft.) A compact, dark green foliated sort of much beauty. In growth it resembles the dwarf *Arbor-Vitæ*, but it is much finer.

12 to 18 in. Trans.....\$ 35 each \$2 50 per 10

2 ft. ".....75 " 5 00 " 10

var. nana. (5 to 6 ft.) A very compact variety of the above.

YUCCA. Adam's Needle.

Yucca angustifolia. Rocky Mountain Yucca. (2 ft.) This sort has very narrow leaves and blooms before the others, in the second week of June.

2 year. Trans.....\$ 35 each \$2 50 per 10 \$12 00 per 100

" **filamentosa.** (2 ft.) The well-known garden Yucca, blooming towards the close of June. It is the best known and most largely planted of all the Yuccas.

3 year. Trans.....\$ 35 each \$2 00 per 10 \$10 00 per 100

Extra sized.....50 " 3 50 " 10

" **gloriosa.** (2 ft.) This one makes a trunk in time. It is hardy here, but not further north. It blooms the last thing in the fall.

3 years.....\$ 50 each

" **recurvifolia.** (2 ft.) Resembling filamentosa, but the recurved foliage distinguishes it.

3 year.....\$ 50 each

YUCCA FILAMENTOSA.

This is an indispensable plant in ornamental gardening. There are many places where a clump of dwarf, broad leaved evergreens are necessary, and in such instances the Yucca can be used advantageously. Besides forming a unique mass of green foliage, the effect produced when the plants are in bloom is all that can be desired.

It will thrive in dry and poor soil and in shady places.

Yucca filamentosa.

RHODODENDRONS.

THEIR CULTURE, DIRECTIONS FOR PREPARING BEDS AND METHOD OF PLANTING WITH OTHER RARE SHRUBS.

The Rhododendron is one of the most beautiful plants in cultivation, either when planted as a single specimen on the lawn, or in beds. Its heavy, dark green foliage is striking, both in winter and summer, to say nothing of the great masses of varied colored flowers, which are produced in large trusses on the ends of nearly every branch of the plant. The flowers open during the latter part of April and the early part of May, and as all the buds do not open at the one time, there is always a profusion of bloom for a period of several weeks. The finest effect is produced by planting in beds the number of plants in a bed is immaterial, though, naturally, the larger the bed and the more plants there are in it, the greater will be the display.

It is a mistaken idea, that many have, that Rhododendrons are not hardy. Of course, as with many other trees and plants, some varieties will not stand our climate; but we have been handling these plants so long that we are thoroughly conversant with those varieties best suited for this country, and on no account would we send anything else but the very best ones.

We have frequently been asked whether Rhododendrons need any especial care. They do not, though like everything else they can be made to grow better and give finer bloom if some extra care be given to their cultivation.

Rhododendrons have a mass of small, hair-like, fibrous roots; and it has been found that when the soil is light and good drainage given them, they do remarkably well. While they like plenty of water, they are averse to having it stagnant about the roots.

When planning a bed of Rhododendrons, it would be well to see that the following directions are observed in preparing it, so as to produce the very finest effect: The soil should be dug out about four feet deep and the bottom filled in with about two feet of broken stone or similar material, finishing with about two-thirds good top-soil—sod, if it can be procured—and one-third sand, with a good sprinkling of well-rotted stable manure. Prepared in this way it will be cool and moist all the time. The plants can be set right in this bed, putting them about three or four feet apart, according to the sized

plants used, and they will thrive, bloom and be sure to give a great deal of pleasure.

Some varieties grow faster than others, and if the bed is to be viewed from all sides, the largest plants should be placed in the middle, but otherwise they should be planted at the back of the bed. A glance at the plants will at once enable any one to select the taller growing ones from the others. In supplying these plants, we always put in a portion of the taller growing ones for this purpose.

A very pretty and desirable effect can be produced by mixing in a few of the hardy *Ghent* and *Mollis Azaleas* along the outer edges of the bed. These do not grow as large as Rhododendrons, and as they have entirely different colored flowers, they materially add to the beauty of the bed.

A comparatively unknown plant—*Andromeda Japonica*—will also be found valuable in this connection. It has light green leaves, which it retains all winter. The flowers are white and in sprays, completely covering the plant, and looking not unlike sprays of Lily of the Valley. It blooms very early in the spring, and would be the first to open when used in connection with the other plants noted in this article. It is not a fast growing bush, and would rarely make a tall plant, but rather spreading. It is perfectly hardy, and desirable in every way, and several plants should be used in every Rhododendron bed. (For prices of *Andromedas* see page 46.)

To make a complete finish, put a row of the creeping *Daphne cneorum* around the extreme border of the bed. It is a most charming plant, with beautiful, fragrant, pink flowers. It blooms almost the entire summer and fall. It is very hard to secure good plants, or, in fact, plants of any kind, and we feel particularly pleased at having been able to propagate a fine stock of them. (For prices see page 47.)

While Rhododendrons require no winter protection, we have found it to be time well spent to fill forest leaves, straw, hay or similar material in among them late in the fall. It keeps severe winds from the plants and frost from their roots, and they always look better for it in the spring. An occasional top dressing of well-rotted stable manure will also be advantageous.

Album elegans, white.

B. W. Elliot, deep rose, dark spots.

Blandyanum, rosy crimson.

Cyaneum, purple.

Catawbiense, seedlings.

Duchess of Bedford, crimson light centre.

Delicatissimum, clear white, tinted with pink.

Everestianum, rosy lilac.

John Walter, rich crimson.

Minnie, bluish white, upper petals yellow.

Michael Waterer, brightest scarlet crimson.

Perspicuum, good white.

Pictum, clear white, orange spots.

Queen, fine white.

Roseum elegans, rose.

2 to 3 ft. " 35 " 2 00 " 10

LARGE FLOWERED CLEMATIS.

The Clematis, always a great favorite, because of its usefulness for purposes where vines are required, as well as for the beauty of its flowers, has gained even a firmer foothold than before, within a few years past, and chiefly because of the great strides made in the production of kinds with large and handsome flowers. It is a good many years ago since the magnificent Jackmanni was in-

roduced, and, though unequalled yet in its general usefulness and large purple flowers, there are other kinds of different colors which command universal admiration. And it must not be forgotten that these large flowered ones do not end their display with the one course of flowers, but have occasional blossoms at intervals throughout the season.

Prices, extra large, two and three years old, 50 cents each, or \$4 00 per 10.

Azurea grandiflora, lilac.

Bangholme Belle. A new variety, pure white, extra large flowers.

Duchess of Edinburg, white.

Gypsy Queen, rich, dark, velvety purple.

Jackmanni, violet purple.

Lanuginosa Belisaire, lavender.

Star of India, reddish plum, red bars.

CLEMATIS.

Clematis coccinea. A pretty herbaceous sort with bell-shaped, scarlet flowers.

2 ft. In pots.....\$ 35 each \$2 00 per 10

“**flammula**. Sweet Clematis. The feathery, white, sweet scented flowers of this vine makes it much called for.

18 to 24 in. In pots.....\$ 35 each \$2 00 per 10 \$12 00 per 100

“**paniculata**. A new introduction from Japan, and one of great merit. Is a strong, rapid and vigorous grower, and in late summer it produces sheets of medium sized, pure white flowers of the most pleasing fragrance. It is perfectly hardy and finely adapted for covering trellises or fences.

2 year. Strong.....\$ 50 each \$3 50 per 10

Extra strong flowering roots 75 " 5 00 " 10

“**Virginiana**. Wild Clematis. One of the fastest growing of all. The flowers are white, in clusters, succeeded by feathery white seeds.

2 ft. Trans.....\$ 35 each \$2 00 per 10

Clematis vitalba. English Clematis. Virgin's Bower. Of much resemblance to the last named, and like it, of extremely fast growth.

3 year roots.....\$ 25 each \$1 50 per 10 \$8 00 per 100
2 ft. in pots.....35 " 2 00 " 10

“**viticella**. This is largely used for covering banks, rocks, or for any similar purpose. Flowers purple, about two inches in diameter. It is a good strong grower, and perfectly hardy.

3 year roots.....\$ 25 each \$1 50 per 10 \$8 00 per 100
2 ft. in pots.....35 " 2 00 " 10 12 00 " 100

DECUMARIA.

Decumaria barbara, (Self climber.) A native vine, clinging by rootlets, as ivy does. Its foliage is shining green, and in the latter part of June it bears clusters of white flowers.

18 to 24 in. From pots....\$ 50 each \$3 50 per 10

DIOSCOREA.

Dioscorea batatas. Cinnamon Vine.

3 year roots.....\$ 35 each \$2 00 per 10

DOLICHOS. (Pueraria.) Kudzu Vine.

Dolichos Japonicus. An extremely fast growing vine, with very large leaves, and bearing small racemes of rosy purple pea-shaped flowers towards the close of August. Mr. A. H. Olmstead, of Hartford, Conn., whose residence, with the Dolichos growing upon it, is illustrated above, writes of this vine: "I have used them only for decoration of balcony heretofore, but this year gave them rope up to loggia, and they were not satisfied with that (45 feet), but I believe would have grown to the very pinnacle on top of roof, if allowed to. It is a veritable 'Jack-and-the-Bean-Stalk' vine." One plant by mail 35 cents. Strong 1 year roots.....\$ 25 each \$1 50 per 10 \$10 00 per 100

Dolichos Japonica.

(From a photograph of a residence in Hartford, Conn.)

EUONYMUS.

- Euonymus radicans.** This is a self-clinging vine, slow growing until it gets well started. It clings to walls as ivy does. 12 to 18 in. Trans.....\$ 25 each \$1 50 per 10 \$10 00 per 100
- " **var. variegatus.** A variety of the above with variegated leaves. 12 to 18 in. Trans.....\$ 25 each \$1 50 per 10 \$10 00 per 100
- " **var. stricta.** Upright, bush growing, green leaved sort. 12 to 18 in. Trans.....\$ 25 each \$1 50 per 10 \$10 00 per 100

Euonymus radicans variegatus.

GELSIMIUM. Carolina Jasmine.

- Gelsimium sempervirens.** A well-known vine to those who visit the South, where it is found wild, clambering over bushes and up small trees. Its golden yellow blossoms appear early in spring. 2 ft. Trans.....\$ 35 each \$2 00 per 10

HEDERA. Ivy.

- Hedera Helix.** English Ivy. The old, common ivy. This is hardy here, and does especially well when planted on the eastern or northern side of buildings, where it is free from the sun in winter. 18 to 24 in. In pots.....\$ 25 each \$1 50 per 10 \$10 00 per 100

HYDRANGEA.

- Hydrangea Scandens.** Climbing Hydrangea. This has large leaves and bears large heads of white flowers in early June. It makes a heavy growth, advancing slowly until well established. 3 to 5 in. In pots.....\$ 35 each \$2 50 per 10

JASMINUM.

- Jasminum nudiflorum.** Yellow Jasmine. This is half vine and half shrub. It can be used either way. Its beautiful yellow flowers expand just as soon as winter disappears. 2 ft. Trans.....\$ 35 each \$2 00 per 10 \$12 00 per 100
- " **officinale.** This is the hardy white Jasmine, bearing its sweet scented, white flowers in June. 3 ft. Trans.....\$ 35 each \$2 00 per 10 \$12 00 per 100

" **var. alba.** White Flowered.

12 to 18 in.\$ 35 each \$2 00 per 10

" **var. plena.** Double Flowered.

2 ft.\$ 35 each \$2 00 per 10

HARDY FERNS.

Ferns might be used in gardens much more than they are, for not only are they beautiful in summer, but many of them are evergreen, affording something green for rock work and other places in winter time. Ferns like shade, but at the same time must have some air. Damp, shady places are the ones they prefer, and as such spots do not suit many plants, ferns are especially valuable for the purpose.

Evergreen sorts are marked (E.)

PRICES.—Plants from pots 25 cents each. \$1 50 per 10.

Hedge of Californian Privet, (*Ligustrum ovalifolium*.)—See page 58.

(On the grounds of Mr. A. H. Mason, Germantown. The roadway descends abruptly on the right of the photograph, leaving the hedge about 10 feet above the road near the top of a wall, showing that this plant will thrive in very dry situations.)

HEDGE PLANTS.

DIRECTIONS FOR PLANTING.

SOIL. In planting hedges, care should be taken to secure a quantity of good top-soil with which to fill in about the roots of the plants. This is especially the case when evergreen hedges are to be planted as they require a great deal of nourishment to keep them healthy and of a good, rich color. Well-rotted stable manure should also be worked in the trench with the soil. Do not cramp the roots in a small, narrow trench; dig a good wide one so that the roots can be spread out flat and still not touch the sides of it.

MANURE. After the trees are planted, put a coating of manure on the surface of the soil around the plants, covering all the earth that has been disturbed in the planting. This mulch should be left on for a year, and finally worked into the ground.

EVERGREENS, running in size from 12 to 24 inches, can be planted about 8 to 12 inches apart in the rows; but the larger sizes, from 2½ to 3½ feet must be set about 18 inches apart. They should be pruned when planted; it tends to make the plants more bushy, making the shaping of the hedge an easy matter afterwards.

DECIDUOUS PLANTS. The distance these should be set apart will depend mainly upon the character of the plants purchased. One and two year old seedlings or cuttings should be set about

six inches apart, though if planted in a double row they may be set 8 inches apart. Bushy transplanted stock in sizes from 2 to 3 feet may be set 12 inches apart, or if in double rows, 15 inches apart. Larger plants should be set according to their size.

DOUBLE-ROW HEDGES. These are made where a very thick and dense hedge is required, and they make much the best hedges under any condition. The plants are set in two rows, each row about 6 to 9 inches apart, according to the size of the plant used, and the plants from 6 to 15 inches apart in the rows.

OUR PLANTS are particularly fine for hedging purposes, especially those marked "Trans." These, if set out as directed, and cut back to within a few inches of the ground, will push up strong stems and form a very thick, bushy hedge. They will make a good, strong hedge if not pruned back at once, but we always advise pruning as being the best plan in the end. The seedling plants will also make good hedges in time, though naturally not as soon as the transplanted stock. They must be cut to the ground as soon as planted, and if cut back again the second year they will make even a stouter hedge. These plants are particularly useful when it is intended to plant double rows. Strong growing plants like the Honey Locust, Osage Orange and Buckthorn, are always sold as seedling plants, it being seldom that transplanted stock is used.

Arbor Vitæ. American. This is a good hedge plant for either low or high ground, and especially where a compact, upright growing evergreen is wanted. It can be trimmed to form a wall not more than two feet wide at the bottom and the same at the top, and in this way it is frequently used as a hedge around a vegetable garden.

5 to 6 ft. "	7 50	" 10	40 00	" 100

Hemlock Spruce. This is largely used, and especially around Philadelphia. It makes a good hardy hedge, and is very dense and neat in its growth. It will not thrive in a wet situation but can be grown in dry and stony ground, and in any ordinary location.

8 to 12 in. Trans.....	\$1 25	per 10	\$10 00	per 100
12 to 18 in. "	1 75	" 10	15 00	" 100
2 feet. Bushy	2 50	" 10	20 00	" 100

Norway Spruce. (See illustration page 46.) This is a good, strong growing evergreen, and makes one of the finest of hedges. It is very hardy and grows very dense and bushy. Its rich green foliage is particularly attractive. Like all evergreens it does best in good rich soil, and it should be frequently mulched with rotten manure. We recommend it as one of the best evergreen hedge plants.

15 to 18 in. Trans.....	\$1 50	per 10	\$10 00	per 100
18 to 24 in. "	2 00	" 10	12 00	" 100

2½ to 3 ft. "	4 00	" 10	20 00	" 100
4 ft. "	5 00	" 10	35 00	" 100

Box Edging. This is the dwarf Box Edging used in all the old gardens and which is now again in great demand for edging garden walks and similar situations. Our plants are particularly strong, and always give satisfaction. They are grown from large, strong cuttings, and we give them ample time to root. The extra large stock will be found particularly effective. (Read description of this stock on page 47.)

Extra heavy.....	\$ 50	per yard	\$40 00	per 100 yards
Medium heavy.....	35	" "	30 00	" 100

Althæa. These plants make one of the most beautiful flowering hedge plants, blooming at a season when few other plants are in flower. The large Hollyhock-like flowers make a very attractive appearance, especially when the hedge is composed of the different varieties.

1 foot. Cuttings.....	\$1 50	per 10	\$ 7 00	per 100
2 to 2½ ft. Trans.....	2 00	" 10	10 00	" 100

Beech. American. This is being largely used now for a good, hardy, ornamental hedge. Though it is naturally a strong grower, it can be trimmed into a good solid hedge by constant pruning. It seems especially adapted for this purpose for planting near the sea coast, and in places where many other hedge plants are not hardy or will not thrive. It likes a rich soil, though it will grow and produce good results on a poor and stony ground.

2½ to 3 ft. Trans.....	\$2 50	per 10	\$15 00	per 100
3 to 3½ ft. "	3 50	" 10	25 00	" 100
4 to 5 ft. "	7 50	" 10	50 00	" 100

Beech, European. The European Beech is used quite as much as the American, and it has the additional advantage of being more twiggy and of holding its dead leaves throughout the winter. On this account it makes more of a screen in the winter than any other deciduous hedge plant. The Beech should be sheared as often as necessary in order to keep it bushy, and when planted it should be cut to the ground several times in order to make it thick at the bottom.

3 to 4 ft. Trans.....	\$3 50 per 10	\$25 00 per 100
4 ft. "	5 00 " 10	35 00 " 100
5 ft. "	7 50 " 10	50 00 " 100

Berberry, Green-leaved. A very good ornamental hedge and one that is also more or less defensive, can be made by the use of the Berberry. It is a fairly strong grower, and the branches being completely covered with small thorns make of it a particularly solid hedge. In the spring it is covered with small yellow flowers followed later by bright red berries. It makes a very attractive plant. It will grow in quite low situations, and equally as well on high ground.

2 ft. Seed.....	\$1 00 per 10	\$5 00 per 100
12 to 18 in. Trans.....	1 50 " 10	10 00 " 100
2 to 2½ ft. "	2 50 " 10	12 00 " 100

" Purple-leaved. It is of exactly the same character as the green-leaved, with the exception that the foliage is purple, and on this account it is very largely used.

18 to 24 in. Seed	\$1 00 per 10	\$5 00 per 100
12 to 18 in. Trans.....	1 50 " 10	10 00 " 100
2½ to 3 ft. "	2 50 " 10	12 00 " 100

" Thunberg's. Of all deciduous shrubs, we know of none that we would recommend as highly for a low, dwarf hedge, as we do this. The twigs and branches are quite spreading, and they are completely covered with small thorns. The plant grows extremely thick right from the ground, frequently sending strong shoots from the collar. It will not make a hedge of more than 3 or 4 feet in height in many years. It requires little pruning to keep it in shape. The leaves are small, light green, and towards fall assume a brilliant scarlet color. The berries also turn bright scarlet when they are ripe. The plant seems to thrive in almost any situation.

8 to 12 in. Seed.....	\$1 00 per 10	\$7 50 per 100
12 to 18 in. "	1 50 " 10	10 00 " 100
10 to 12 in. Trans.....	2 50 " 10	15 00 " 100
12 to 18 in. "	3 00 " 10	20 00 " 100

Buckthorn. While being used as an ornamental hedge, it is perhaps in greater demand for hedging around farms and large places. It makes a very stiff and solid hedge, and if cut back to the ground several times after planting, it becomes very thick at the bottom. It is extremely hardy and is in great demand on this account, in the northern and northwestern States.

18 to 24 in. Seed.....	\$75 per 10	\$3 50 per 100
2½ to 3 ft. Trans.....	2 00 " 10	8 00 " 100
3 to 4 ft. Seed.....	1 50 " 10	6 00 " 100

Hardy Orange. (*Limonia trifoliata*.) This plant has been recommended highly for hedging purposes within the last few years, and where it is hardy we think that but few other plants can compare with it as a strong, defensive hedge. The spines are from 2 to 3 inches long and very stout, and if the hedge is trained properly when young, we think it would be impossible for any animal to get through it. We doubt if it would be hardy much further north than Pennsylvania. With us it stands the winter perfectly.

12 to 18 in. Seed.....	\$75 per 10	\$6 00 per 100
3 to 4 ft. "	1 00 " 10	7 00 " 100

Hawthorn, American. The large, strong spines of the American Hawthorn, make it a strong defensive hedge. It is also very hardy, and can be used anywhere in this country.

2 to 3 ft. Seed.....	\$1 50 per 10	\$10 00 per 100
----------------------	---------------	-----------------

" English. While not as strong a grower as the American, nor having its spines as large, yet its thick, bushy growth makes it an excellent hedge plant, and one that is impenetrable to animals. It is the thorn used almost wholly throughout England for hedging purposes.

18 to 24 in. Seed.....	\$1 00 per 10	\$7 00 per 100
3 to 4 ft. "	1 50 " 10	10 00 " 100
4 to 5 ft. Trans.....	3 50 " 10	20 00 " 100

Honey Locust. This is also used largely for farm hedges, and being one of the hardiest plants it is in great demand in the very cold States. The stems are very prickly, and it is one of the best defensive hedges.

6 in. Seed....	\$50 per 10	\$1 50 per 100	\$6 00 per 1000
12 to 18 in. "	75 " 10	2 00 " 100	10 00 " 1000
2 to 3 ft. "	1 00 " 10	5 00 " 100	

Hornbeam, American. This resembles the American Beech very much, but it is not as strong a grower, and it is perhaps a better hedge on this account. It makes a good, hardy hedge anywhere in the United States.

12 to 18 in. Seed.....	\$1 00 per 10	\$7 50 per 100
2½ to 3 ft. "	2 00 " 10	15 00 " 100

" European. This is more twiggy and makes perhaps a more dense hedge than the American, and it also holds its dead leaves throughout the winter, making it somewhat of a screen.

18 to 24 in. Trans.....	\$2 00 per 10	\$10 00 per 100
-------------------------	---------------	-----------------

Osage Orange. This is the well-known Osage hedge plant used so extensively throughout the Middle and Southern States. By careful pruning, it makes a strong, defensive hedge that will turn cattle. It is largely used on farms and along roadways.

1 year. First-class.....	\$75 per 100	\$4 00 per 1000
2 " Extra sized.....	1 50 " 100	8 00 " 1000

Privet, California. Of all the ornamental hedge plants, this is the most highly prized. If cut to the ground one or two years after planting it makes a very thick hedge right from the bottom, sending up many strong shoots. The leaves are a rich green and will remain on the plants up to Christmas, and if they are a little sheltered they will keep green almost all winter. This is especially the case if the hedge has attained some age and has frequently been trimmed. Though it is a strong grower it can be kept to a low size by frequent trimming. We illustrate on page 56, a hedge of the California Privet on the grounds of Mr. A. H. Mason, which is at least 10 years old, and it is no more than 18 inches high, having been kept that low by constant trimming. At Newport, R. I., there are a great many hedges of this plant that are 6 and 7 feet in height, which have been trimmed flat on the sides, so that they look like a solid green wall. It seems to thrive particularly well near the sea coast; and the Privet Hedges at Newport are one of the great attractions. Drought does not seem to injure it in any way. The roadway shown on the right of the illustration descends quite abruptly, leaving the hedge at least 10 feet above it. There are many large Chestnuts and other trees at this point, yet the dry weather of last summer did not seem to injure it in the least. We know of a hedge that is planted close beside a row of large Silver Maples, yet it seems to thrive. (See cut page 56.)

12 to 18 in. Cuttings.....	\$50 per 10	\$3 00 per 100
12 to 18 in. Trans.....	1 00 " 10	5 00 " 100

HARDY HERBACEOUS PLANTS.

The value of hardy herbaceous plants to a garden has long been known to those fortunate enough to have a collection of them. Bedding plants from the greenhouse will always be needed, because of the flowers of some and the bright foliage of others. But they can never displace perennial plants in the popular affection. Columbine, Larkspur, Veronica, Flag, Phlox, Pink, Canterbury Bell, Hollyhock, and similar flowers are household words with lovers of flowers, as much so, almost, in our country as in the old world. When perennial plants are once in the garden, they may be said to be there forever. As each succeeding spring comes, the warm days bring forth the different kinds to greet us, and they truly become as old friends to us; and we look for them and value them as we can not do the annual and transitory ones from the greenhouse. And for making displays at certain periods of the season, how useful they are! What a show large masses of Phlox procumbens make in early spring! See the uses to be made of the low-growing Sedums, Cactuses, Sempervivums, Armerias, Ajugas and like plants! Masses of Day Lilies, Flags and Columbines can be made which will make a grand show. Then, when fall comes, and the many composite plants bloom, what effects are made by the yellow flowers of the Coreopsis, Helianthus and the Chrysopsis, and other kinds of other colors, such as the Boltonias and Asters!

While individual plants are very pretty, the most striking effects are produced by setting several plants of one kind in a clump. Thus six plants of Helianthus, or a dozen of Lychnis, planted in a group would make a greater display than if six different sorts were planted together, as the mass of one color would attract the eye.

PRICES. Special Notice:—The plants offered by us are nearly all field grown, and the clumps in most cases from three to four times as large as those furnished by others,—making our prices really lower. Customers, when comparing prices, should take this into consideration. We will furnish small-sized plants when so ordered at $\frac{1}{2}$ discount from prices named in the catalogue. *Special prices* given for large quantities.

COLLECTIONS OF OUR SELECTING.—We are always glad to make a good selection of plants for our customers where they have no desire or lack time to choose for themselves; and if information is furnished as to size, shape of bed, location, etc., we can state the number of plants required, etc.

Prices. For strong plants of our own selection, \$8 00 per 100 (25 or more at 100 rates.)

Achillea millefolium rubrum. Deep Rose. July and August. 1 foot. 15 cents each \$1 25 per 10.

" Ptarmica plena The Pearl. White, Double. July and August. 2 feet. 15 cents each. \$1 25 per 10.
Achilleas are spreading plants, especially the first named, soon carpeting the ground with green foliage. The flowers of "The Pearl" are invaluable for cutting.

Actinomeris helianthoides. Yellow. July. 3 feet. 15 cents each. \$1 25 per 10.

" squarrosa. Yellow. July. 3 feet. 15 cents each. \$1 25 per 10.
These are some of the autumnal composite plants, to which we owe so much of the beauty of that season.

Ægopodium Podagraria variegata. White. June. 1 foot. 15 cents each. \$1 25 per 10.

Agrostemma (Lychnis) coronaria. Crimson. June. 2 feet. 20 cents each. \$1 50 per 10.
This has silvery green foliage, which sets off the deep crimson flowers to great advantage.

Ajuga reptans. Blue. May. 4 inches. 15 cents each. \$1 25 per 10.

" genevensis. Blue. May. 4 inches. 20 cents each. \$1 75 per 10.
Ajugas are fine plants for covering bare ground, soon spreading and forming a green mat of leaves.

Allium senescens. Dull Pink. July. $1\frac{1}{2}$ feet. 15 cents each. \$1 25 per 10.

" Camptochaticum. Dull Pink. July. $1\frac{1}{2}$ feet. 15 cents each. \$1 25 per 10.

Althæa officinalis. Whitish Pink. July. 3 feet. 15 cents each. \$1 25 per 10.

Amsonia salicifolia. 15 cents each. \$1 25 per 10.

Anthemis tinctoria. Yellow. June to September. 2 feet. 20 cents each.
This is one of the best of perennials, flowering freely for several months.

Aquilegia glandulosa. Purplish White. June. 2 feet. From pots. 15 cents each.

" vulgaris. Purple. June. 2 feet. 15 cents each. \$1 25 per 10.

" Canadensis. Scarlet. May and June. 1 foot. 15 cents each. \$1 25 per 10.

Aquilegia chrysantha. Yellow. June and July. $1\frac{1}{2}$ feet. 20 cents each.

" cœrulea. Blue. June. $1\frac{1}{2}$ feet. 20 cents each. \$1 75 per 10.

" olympica. Purplish Red. June. 2 feet. 15 cents each. \$1 25 per 10.

" Skinneri. Yellow, red spurs. June. 3 feet. 25 cents each. \$2 00 per 10.

Aquilegias, or Columbines as they are popularly called, are needed in all collections. They take care of themselves well and bloom profusely.

Armeria maritima. Purplish Pink. May. 6 inches. 25 cents each. \$2 00 per 10.

This is known as sea pink. It grows in compact clumps, from which ascend the flower stalks. It is extremely useful for edging borders and beds, forming a pretty line of compact green. The flower stalks rise from 6 to 9 inches above the foliage.

Asclepias incarnata. Rosy Flesh. July and August. 3 feet. 15 cents each.

" tuberosa. Orange Yellow. July and August. 1 foot. 20 cents each.

Asperula tinctoria. White. July. 15 cents each.

Aspidistra lurida. Evergreen. 1 foot. 25 cents each.

Aster novæ-angliæ. Purple, very showy. September and October. 5 feet. 20 cents each.

" oblongifolius. Pale purple. September. 3 feet. 25 cents each.

" paniculatus. White. August. 15 cents each.

" tartaricus. Light Purple. October. 4 feet. 25 cents each. \$2 00 per 10.

Asters are particularly valuable for the beautiful display they make in autumn. Of those named above, all are desirable, but Novæ-angliæ and Tartaricus are particularly fine.

Astilbe Japonica. White. June. $1\frac{1}{2}$ feet. 20 cents each. \$1 75 per 10.

" Thunbergii. White. July. 2 feet. 20 cents each.

The plume-like sprays of astilbes make them valued for outdoor display as well as for pot culture, for which purpose florists find them so useful.

Baptisia Australis Blue June and July. 3 feet. 20 cents each. \$1 75 per 10.

Betonica Orientalis. Pink. July. 1 foot. 15 cents each. \$1 25 per 10.

" **rosea.** Rosy Pink. June and July. 9 inches. 15 cents each. \$1 25 per 10.

Betonicas are showy plants, throwing their flower spikes well up above their foliage.

Bocconia cordata. White. July. 4 feet. 15 cents each. \$1 25 per 10.

Boltonia glastifolia. White. August and September. 4 feet. 20 cents each. \$1 75 per 10.

" **latisquama.** Deep Lilac. August and September. 4 feet. 20 cents each. \$1 75 per 10.

Both of these species are pretty, latisquama especially so. As a showy perennial we can particularly recommend it. It attracted much attention in our grounds the past season.

Boltonia latisquama.

Calamintha patavina. Purple. July and August. 1 foot. 15 cents each. \$1 25 per 10.

Calirhoe involucrata. Rose. July and August. 6 inches. 20 cents each.

Calimeris incisa. Light Blue, almost White. July and August. 1½ feet. 25 cents each. \$2 00 per 10.

A very pretty aster-like plant; new, and making a nice display for a month or two.

Campanula grandiflora alba. White. July. 2 feet. 25 cents each. \$2 00 per 10.

" **multiflora.** Pale Blue. August. 2 feet. 15 cents each. \$1 25 per 10.

" **pulcherrima.** Dark Blue. July. 2 feet. 15 cents each. \$1 25 per 10.

Campanulas are Canterbury Bells. All are pretty, and the large flowered ones, like grandiflora, are particularly fine.

Centauria amara. Purple. July and August. 1 foot. 15 cents each. \$1 25 per 10.

" **declinata.** Purplish White. July. 1 foot. 15 cents each.

" **macrocephala.** Yellow. July. 1 foot. 15 cents each. \$1 25 per 10.

Chelone barbata. Scarlet. July. 2 feet. 20 cents each. \$1 75 per 10.

" **Lyoni.** Rosy Pink. August and September. 2 feet. 25 cents each.

Barbata is one of the showiest plants in the border. Its bright, shining green leaves well set off the spikes of scarlet flowers.

Chrysanthemum. Pompones. Assorted mixed. October and November. 2½ feet. From pots. 15 cents each. \$1 25 per 10.

These are the old style small flowered chrysanthemums, which are the *hardest* kinds there are, and for this reason they are generally popular for general garden planting. In rich soil they bloom profusely and the flowers attain quite a fair size.

Chrysopsis villosa. Yellow. August and September. 4 feet. 15 cents each.

This chrysopsis makes a brave showing in the hot months of late summer. Its flowers are in great profusion.

Cirsium pannonicum. Pink. July to September. 4 feet. 15 cents each. \$1 25 per 10.

Clematis Davidiana. Blue. August and September. 3 feet. 35 cents each.

Convallaria majalis. (Lily of the Valley.) White. May. 6 inches. Clumps. 15 cents each. \$1 25 per 10. \$10 00 per 100.

" **var. variegata.** White. May. 6 inches. Clumps. 25 cents each. \$2 00 per 10. \$15 00 per 100.

The variegated Lily of the Valley has the foliage striped with green and white.

Coreopsis grandiflora. Deep yellow. June and July. 1½ feet. 15 cents each. \$1 25 per 10.

The flowers of the coreopsis are produced on long stems, and being of good size they are very showy. They are valuable for cut flowers.

Coronilla varia. Pinkish White. June. 1 foot. 15 cents each. \$1 25 per 10.

A half climbing plant. Producing its flowers in good sized heads and for a long while; very pretty.

Crucianella suaveolens. Pinkish White. August. 1 foot. 15 cents each.

Delphinium grandiflorum. Dark Blue. June and August. 3 feet. 20 cents each. \$1 75 per 10.

Larkspurs are particularly beautiful flowers, their showy blue blossoms making a display which could not be obtained from any other plant.

Dianthus barbatus.

Dianthus cruentis. Red. June. 1 foot. 15 cents each. \$1 25 per 10.

" **barbatus.** Sweet William, Various. (See cut.) June. 1 foot. 15 cents each.

Dianthus plumarius, fl. pl.

Dicentra eximea. Light Pink. June and August. 1 foot. From pots. 20 cents each. \$1 75 per 10.

" **spectabilis.** Bleeding Heart. Pink. May and June. 1½ feet. 20 cents each. \$1 75 per 10.

This is one of the showiest of perennials, and one often grown in pots for spring flowering.

Dictamnus rubra. "Gas Plant." Red. July. 20 cents each. \$1 50 per 10.

Digitalis purpurea. Purple. June. 2 feet. From pots. 15 cents each. \$1 25 per 10.

Fox gloves, as these are called, have long been known as among the most useful of garden plants.

Dracocephalum nutans alpina. Blue. May to July. 6 inches. 20 cents each. \$1 75 per 10.

A very pretty, spreading plant, soon covering a good deal of ground.

Echinops exaltata. Bluish. July. 4 feet. 20 cents each. \$1 75 per 10.

Epimedium roseum. Rose. May. 1 foot. 25 cents each.

Eryngium planum. Bluish. August and September. 1½ feet. 15 cents each. \$1 25 per 10.

While the blossoms are not conspicuously beautiful, they are much visited by bees, and the very large leaves and peculiar flower heads make the plant attractive. In a large mass the odd coloring of the flowers makes it especially desirable.

Funkia Fortuni glauca. July. 2 feet. 25 cents each. \$2 00 per 10.

" **lancifolia.** Blue. August and September. 1½ feet. 20 cents each. \$1 75 per 10.

" **ovata.** Lilac. August. 1 foot. 20 cents each. \$1 50 per 10.

" **var. variegata.** Lilac. August. 1 foot. 25 cents each.

" **sub-cordata.** Whitish-blue. June and July. 1 foot. 20 cents each. \$1 75 per 10.

Day Lily is the popular name of Funkia. Their large leaves and showy flowers, and their hardiness, insure them room in all gardens. Lancifolia blooms later in the season than the others. They are sometimes used as edging for borders.

" **undulata variegata.** White. July. 1 foot. From pots. 20 cents each. \$1 50 per 10.

Gaillardia grandiflora. August. Yellow. 1 foot. 20 cents each. \$1 50 per 10.

Calanthus nivalis. Snow Drop. April. 6 inches. 15 cents each.

Geranium sanguineum. Deep Rose. June to September. 6 inches. 20 cents each. \$1 75 per 10.

This Geranium is pretty and useful. It is of a spreading nature, and is almost always in bloom.

Geranium sanguineum.

Geum triflorum. Rose. April. 9 inches. 20 cents each.

Gladiolus communis. Purple. June. 1½ feet. 15 cents each.

Cypripophila paniculata. White. June. 2 feet. 15 cents each.

Helianthus doronocoides. Yellow. July and August. 4 feet. 20 cents each. \$1 75 per 10.

" **giganteus.** Yellow. August and September. 6 feet. 20 cents each. \$1 75 per 10.

" **Maximilianus.** Yellow. October. 5 feet. 20 cents each. \$1 75 per 10.

Helianthus mollis. Golden Yellow. September and October. 4 feet. 20 cents each. \$1 75 per 10.

" **multiflorus plenus.** Yellow. July to October. 4 feet. 20 cents each. \$1 75 per 10.

When large growing plants, to make a fine fall display, are wanted, these sunflowers are just the thing. As will be seen some one or the other is in bloom from July to October. Maximilianus blooms profusely, and is in great demand. Multiflorus is as double as a dahlia, for which flower it is often mistaken.

Heliopsis lævis. Orange. August to October. 4 feet. 15 cents each. \$1 25 per 10.

A tall growing, composite plant, blooming profusely in the late summer and fall.

Helleborus niger. Yellow. February. 6 inches. 20 cents each.

Hemerocallis fulva. Reddish-yellow. July. 3 feet. 15 cents each. \$1 00 per 10.

" **fulva.** Double. 25 cents each.

" **graminea.** Orange. June. 1½ feet. 15 cents each. \$1 00 per 10.

Heracium giganteum. White. June. 6 feet. 25 cents each.

Heuchera sanguinea. Red. June. 1½ feet. 25 cents each.

" **Wheeleri.** Greenish-white. May. 1½ feet. 20 cents each. \$1 50 per 10.

Hibiscus incanus. Pink. August and September. 4 feet. 20 cents each. \$1 75 per 10.

militaris. Red and White. July and August. 3 feet. 25 cents each. \$2 00 per 10.

" **Moscheutos.** White. July and August. 3 feet. 25 cents each. \$2 00 per 10.

Marsh mallows, as these are called, grow very strong, and produce very large flowers, resembling single Hollyhocks. They thrive either in dry or wet situations.

Hieracium stoloniferum. Lemon. June to August. 6 inches. 20 cents each. \$1 75 per 10.

" **umbrosum.** Yellow. July to September. 2 feet. 20 cents each. \$1 75 per 10.

The stoloniferum spreads quickly, soon forming a green mat, from which the heads of yellow flowers arise.

Hollyhock. Double White, Double Pink and Double Red, strong blooming plants, from pots. 15 cents each. \$1 00 per 10.

Our stock consists of the very best colors. The plants offered are all extra strong and will bloom this coming summer.

" Double Yellow. From pots. 20 cents each. \$1 50 per 10.

Hydrophyllum Canadense. White. May and June. 1 foot. 15 cents each. \$1 25 per 10.

Iberis sempervirens. White. June. 6 inches. 20 cents each. \$1 75 per 10.

The last is an evergreen candytuft, forming a low bushy plant. The heads of white flowers appear well above the foliage.

" **Tenorium.** 20 cents each. \$1 75 per 10.

Iberis sempervirens.

Iris Cengalti. Deep Purple. May and June. 1 foot. 25 cents each. \$2 00 per 10.

" **florantina.** White. May. 2 feet. 20 cents each. \$1 50 per 10.

" **Germanica.** In variety. Various. May and June. 1½ feet. 15 cents each. \$1 25 per 10.

Iris laevigatae (Kæmpferi.) Lactea. White; yellow throat large. June and July. 1½ feet. 20 cents each. \$1 75 per 10.

" **var. (Kæmpferi.) Orion.** Cream; edged pink; yellow throat; large. 20 cents each. \$1 75 per 10.

" **var. (Kæmpferi.) Pyramidalis.** Purple; yellow throat; large. 20 cents each. \$1 75 per 10.

" **var. (Kæmpferi.) Vesta.** Lilac; purple veined; large 20 cents each. \$1 75 per 10.

" **Sibirica.** Various. May and June. 1½ feet. 15 cents each. \$1 25 per 10.

" **Virginica.** Blue. May and June. 1½ feet. 20 cents each. \$1 75 per 10.

Iris are the well-known flags. Of various and beautiful colors, they do well in most all situations. They are very popular. Planted in groups they make a fine display.

Jeffersonia diphylla. From pots. 20 cents each. \$1 50 per 10.

Kitaibelia vitifolia. White. June to August. 5 feet. 15 cents each.

Lamium variegatum. 15 cents each.

Lavandula vera. Lavender. Blue. August to October. 2 feet. 25 cents each.

This is the true lavender, famed alike for its pretty flowers and its pleasant odor.

Leucojum aestivum. White. April. 1 foot. 15 cents each.

Lilium tigrinum. Tiger Lily. Orange. July. 5 feet. 15 cents each. \$1 25 per 10.

Lobelia cardinalis. Scarlet. August. 2 feet. From pots. 20 cents each. \$1 50 per 10.

A lover of damp places, where its spikes of scarlet flowers make a splendid display when in bloom.

Lychnis Chalcedonica.

Lychnis chalcedonica. Scarlet. July to August. 2 feet. 15 cents each. \$1 25 per 10.

" **fios-cuculi.** Double Rose. June. 1 foot. 20 cents each.

The Lychnis, especially the chalcedonica varieties, make a fine display when in flower and they have more or less bloom for a long time.

Lysimachia clethroides. White. July to September. 1½ feet. 15 cents each. \$1 00 per 10.

" **verticillata.** Yellow. July. 1 foot. 15 cents each. \$1 25 per 10.

" **vulgaris.** Yellow. July. 2 feet. 15 cents each. \$1 25 per 10. These flowers are known as moneyworts. All make a good display when in bloom, especially the white one, clethroides.

Lythrum salicaria. Purple. July. 3 feet. 35 cents each. \$2 50 per 10.

The rosy purple flowers of this plant are produced in great profusion.

Malva alcea. Pink. June to August. 2 feet. 15 cents each.

Medicago prostrata. Yellowish. July and August. 8 inches. 15 cents each. \$1 25 per 10.

Mentha rotundifolia. Mauve. July to September. 1½ feet. 15 cents each. \$1 25 per 10.

Monarda didyma. Scarlet. August and September. 1 foot. From pots. 20 cents each. \$1 75 per 10.

" **fistulosa.** Pale Pink. August and September. 2½ feet. 20 cents each. \$1 75 per 10.

Monarda mollis. Pink. June and July. 1 foot. 20 cents each. \$1 75 per 10.

Monardas are known as bergamots, and are valued for their nice scented leaves as well as for their flowers.

Naumbergia thyrsiflora. Yellow. July. 2 feet. 15 cents each. \$1 25 per 10.

A good plant for the forming of clumps.

Nepeta betonicafolia. Blue. July and August. 1½ feet. 15 cents each. \$1 25 per 10.

" **Glechoma.** Blue. July and August. 6 inches. 15 cents each. \$1 25 per 10.

" **macrantha.** Blue. July and August. 2 feet. 15 cents each. \$1 25 per 10.

Enanthe peucedanifolia. White. June. 1½ feet. 15 cents each. \$1 25 per 10.

Oenothera riparia. Yellow. July and August. 1 foot. 15 cents each. \$1 25 per 10.

" **speciosa.** Pink. June to August. 6 inches. 15 cents each. \$1 25 per 10.

" **Youngii.** Yellow. June to August. 1½ feet. 20 cents each. \$1 75 per 10.

Opuntia oplocarpa. Flowers larger, pale yellow, and later than the others. June and July. 9 inches. 20 cents each. \$1 75 per 10.

" **Rafinesquii.** Yellow. June and July. 9 inches. 20 cents each. \$1 75 per 10.

" **vulgaris.** Yellow. June and July. 9 inches. 20 cents each. \$1 75 per 10.

There are many dryish places in a garden in which these hardy creeping cactuses would be well suited.

Origanum vulgare. Purplish White. July 1½ feet. 15 cents each. \$1 25 per 10.

This plant spreads at the root, soon forming a bushy clump, fitting it for many situations.

Pachysandra procumbens. Brownish white. April and May. 1 foot. 15 cents each, \$1 25 per 10.

" **terminalis.** Greenish White. May. 1 foot. 25 cents each, \$2 00 per 10.

The Pachysandra is evergreen. It flowers early, and is a favorite with bees.

PAEONIES.

Our collection of Pæonies embraces many choice sorts, including some superior single flowered varieties which we have found desirable. The extra strong clumps offered by us will probably bloom the coming season.

Double Rose. **Fragrantissima.** Double Pink.
" **Red.** Early. **Single White.**
" **White.** **Pink.**

Reevesii. Double Pink. " **Red.**
35 cents each. \$2 50 per 10, \$17 50 per 100. Extra strong clumps, 50 cents each. \$4 00 per 10.

Papaver Orientale. Poppy. Bright Red. June. 2 feet. From pots. 15 cents each.

The large, satin-like blooms of the poppy are well known, and the plants are always in demand.

" **Greenlandica.** Yellow. July and August. 1 foot. 15 cents each.

Pardanthus Chinensis. Yellow. June. 3 feet. 15 cents each. \$1 25 per 10.

Pentstemon Digitalis. White. June and July. 1½ feet. 15 cents each. \$1 25 per 10.

Phlox procumbens alba. White. May. Clumps. 20 cents each. \$1 50 per 10.

" **var. rosea.** Rose. May. Clumps. 20 cents each. \$1 50 per 10.

" **var. striata.** Striped. May. Clumps. 20 cents each. \$1 50 per 10.

Phloxes do much towards making the garden gay throughout the season. The procumbens type are creeping sorts, and are known as Moss Pinks. They completely carpet the ground. The taller ones known as Perennial Phloxes, are well known for their great beauty and variety of colors. If planted in rich moist ground they flower profusely in July and August, especially if mulched, to keep the roots cool. Groups of them on the lawn make an attractive display.

PHLOX DECUSSATA.

PERENNIAL PHLOX.

The Phlox is one of many hardy perennials that have been in use many years, and of late considerable attention has been given to its improvement. The varieties offered by us have been carefully selected for the beauty of their flowers,—several new sorts having been personally selected by one of our firm when in Europe recently. Phloxes are particularly useful for planting among shrubbery beds,—they occupy but little room and bloom at a time when but very few shrubs flower.

Prices of named sorts. 15 cents each. \$1 25 per 10. \$10 00 per 100

Eclaireur.

Embracement. Coppery Rose, Purple Eye.

Eckman Chatrian. Violet, Rosy Purple.

Jean d' Arc. White. Dwarf. Early Flowering.

Josephine Gerhardt.

Le Soleil. Early. Salmon Pink.

Lothair. Brilliant Salmon Rose.

Lustre.

Louis Van Houtte.

Matador. Orange and Salmon.

Mme. Leonard Lille. Red Striped.

Mme. Rendatler. Lilac.

Nattie Stewart. Pure white.

Napoleon III. Red Striped.

Pluton. Brilliant Carmine.

Puritan. Soft Rosy Pink.

Princess de Furstenburg. White Carmine Eye.

Saison Lierval. White. Centre Violet Rose.

Washington. White. Rosy Purple Centre.

White Lady. Large White.

William Robinson. Pale Rosy Salmon, Violet Centre.

Phlox tuberosa. Purple. June and July. 4 feet. 15 cents each. \$1 25 per 10.

Phystostegia denticulata. Lilac White. July. 2 feet. 15 cents each. \$1 25 per 10.

" **Virginica.** Lilac white. July and August. 2 feet. 15 cents each. \$1 25 per 10.

Platycodon Mariesi. Blue. June to September. 1 foot. 25 cents each. \$2 00 per 10.

Plumbago Larpentæ. Purplish Blue. September and October. 15 cents each. \$1 25 per 10.

This is one of the best of late flowering plants, the pretty flowers being produced in great abundance.

Plumbago Larpentæ.

Potentilla coccinea. Scarlet. June to August. 1 foot. 25 cents each. \$2 00 per 10.

" **lacunosa.** Yellow. June to August. 1 foot. 15 cents each. \$1 25 per 10.

" **recta.** Yellow. June to August. 1 foot. 15 cents each. \$1 25 per 10.

" **rupestris.** White. June to August. 1 foot. 15 cents each. \$1 25 per 10.

Polygonatum multiflorum. White. May and June. 1½ feet. 15 cents each. \$1 25 per 10.

Polygonum cuspidatum. White. July to September. 5 feet. 20 cents each. \$1 75 per 10.

This plant produces great quantities of white flowers in late summer, and growing tall and spreading rapidly it soon makes a great display. Three or more plants in a clump form a great attraction.

Polygonum cuspidatum.

Poterium sanguisorba. Red. July. 1½ feet. 20 cents each. \$1 75 per 10.

Primula alba plena. White. May. 4 inches. 20 cents each.

" **vulgaris.** Yellow. May. 4 inches. 25 cents each.

Psoralea sub-acaulis. Lilac. August. 1 foot. 15 cents each. \$1 25 per 10.

Pycnanthemum linifolium. White. August to October. 2½ feet. 15 cents each. \$1 25 per 10.

" **muticum.** White. August to October. 2 feet. 15 cents each. \$1 25 per 10.

Pyrethrum roseum. Rose. June and July. 2 feet. 20 cents each. \$1 75 per 10.

This is one of the prettiest perennials of its season. The flowers are on long stems, just the thing for cutting for bouquets, etc.

Rudbeckia incisa. Yellow. August to October. 1½ feet. 15 cents each.

" **subtomentosa.** Yellow. August to October. 3 feet. 20 cents each.

The large yellow flowers of Rudbeckias make them valuable for late summer display.

" **speciosa.** Yellow. August. 20 cents each.

Ruta divaricata. Yellow. July. 1½ feet. 15 cents each. \$1 25 per 10.

Santolina incana. Silvery foliage. 1 foot 20 cents each. \$1 75 per 10.

Saxifraga crassifolia. Pink. May. 6 inches. 25 cents each.

Sedum fabaria.

Sedum Aizoon. White. June. 6 inches. 15 cents each. \$1 25 per 10.

" **atropurpureum.** June. 1 foot. 15 cents each. \$1 25 per 10.

" **album.** Creeping. White. July. 4 inches, clumps. 20 cents each. \$1 75 per 10.

" **acre.** Love-entangle. Yellow. July. 4 inches, clumps. 20 cents each.

" **fabaria.** Pinkish-white. September and October. 1½ feet. 20 cents each. \$1 75 per 10.

" **hispanicum.** Creeping. White. July. 4 inches, clumps. 20 cents each. \$1 75 per 10.

" **hybridum.** Yellow. July. 4 inches. 15 cents each. \$1 25 per 10.

" **Maximowiczii.** Yellow. June and July. 1 foot. 15 cents each. \$1 25 per 10.

" **rhodiola.** Light Pink. August. 6 inches. 15 cents each. \$1 25 per 10.

" **Sieboldi.** Pink. August. 6 inches. 15 cents each. \$1 25 per 10.

" **spectabilis.** Pink. September and October. 1½ feet. 15 cents each. \$1 25 per 10.

" **speciosum.** Pink. July. 4 inches. 15 cents each. \$1 25 per 10.

" **telephium.** Light Pink. July and August. 1 foot. 15 cents each. \$1 25 per 10.

Sedums are exceedingly useful plants, flourishing in the driest places. The creeping sorts rooting as they grow, soon form a carpet of foliage where they are planted. For rock-work, mounds or other dryish places, they are very much in demand.

Sempervivum ruthenicum. Pink. July. 4 inches. 15 cents each. \$1 00 per 10.

" **tectorum.** Pink. July. 4 inches. 15 cents each. \$1 00 per 10.

" **Verlotii.** Light Rose. July. 4 inches. 20 cents each. \$1 75 per 10.

These plants are of much the same nature as Sedums, and what has been said of them applies to these also.

Senecio Doria. Yellow. June and July. 2 feet. 20 cents each. \$1 75 per 10.

Silphium connatum. Yellow. July and August. 5 feet. 15 cents each.

" **laciniatum.** Yellow. August and September. 3 feet. 15 cents each. \$1 25 per 10.

The laciniatum is the compass plant. Both are large growing sorts, with large, showy yellow flowers.

Solidago Canadensis. Yellow. September and October. 4 feet. 15 cents each. \$1 25 per 10.

" **cæsia.** Golden Yellow. September and October. 3 feet. 20 cents each.

" **latifolia.** Yellow. October. 2 feet. 20 cents each.

" **memoralis.** Yellow. September. 2½ feet. 15 cents each.

" **serotina.** Yellow. September. 3 feet. 20 cents each. \$1 50 per 10.

There are but few more beautiful flowers in Autumn than Golden Rods, as Solidagos are called.

Spiræa floribunda. White. May. 18 inches. 20 cents each. \$1 75 per 10.

" **filipendula Fl. Pl.** Double White. 25 cents each.

" **gigantea.** July. 25 cents each.

" **lobata.** Rosy Pink. July and August. 2½ feet. 15 cents each. \$1 25 per 10.

" **ulmaria Alba Plena.** White. 20 cents each.

" **venusta.** Deep Pink. July and August. 2½ feet. 15 cents each. \$1 25 per 10.

Stachys lanata. Pink. July and August. 1½ feet. 20 cents each. \$1 75 per 10.

This has large, silvery velvety leaves, making its common name, Rabbit's Ears, a most appropriate one. Its thick growth makes it useful for bordering flower beds, for which it is sometimes used.

Stylophorum diphyllum. Yellow. May. 1 foot. 25 cents each.

Symphytum asperim. Violet Blue. June and July. 2 feet. 25 cents each. \$1 75 per 10.

Tanacetum globiferum. Yellow. June and July. 1 foot. 15 cents each. \$1 25 per 10.

" **niveum.** White. June and July. 1 foot. 15 cents each. \$1 25 per 10.

" **vulgare.** Yellow. July. 15 cents each. \$1 25 per 10.

Thalictrum angustifolium. Greenish Yellow. June to August. 1½ feet. 15 cents each. \$1 25 per 10.

" **roseum.** Rose. May and June. 1½ feet. 15 cents each.

" **squarrosus.** Greenish Yellow. May and June. 1 foot. 15 cents each. \$1 25 per 10.

Thermopsis Caroliniana. Yellow. May and June. 1 foot. 25 cents each.

Thymus vulgaris. Garden Thyme. Pink. June to August. 9 inches. 15 cents each. \$1 25 per 10

Tradescantia Virginica.

Tradescantia Virginica. Blue. June to September. 9 inches. 15 cents each. \$1 00 per 10.

" **var. alba.** White. June to September. 9 inches. 20 cents each. \$1 75 per 10.

" **var purpurea.** Purple. June to September. 6 inches. 15 cents each. \$1 00 per 10.

Spiderworts, as these are called, are found growing wild on rocky, damp hillsides, where their pretty flowers make a pleasing picture, but they thrive in any good situation.

Trillium grandiflorum. Pinkish White. May. 6 inches. 15 cents each.

Tritoma uvaria. Red. August to October. 1½ feet. From pots. 15 cents each. \$1 25 per 10.

Tritoma Uvaria.

Tulipa Sylvestris. Yellow. April. 1 foot. 20 cents each.

Vernonia Lettermanii. Purple. August and September. 3 feet. 15 cents each.

" **Arkansana.** Dark Purple. September. 5 feet. 20 cents each.

Veronica gentianoides. Mauve. May and June. 1 foot. 20 cents each.

" **montana.** Blue. May and June. 6 inches. 15 cents each. \$1 25 per 10.

" **rosea.** Rose. June and August. 1 foot. 20 cents each.

" **teucrium.** Blue. June. 1 foot. 15 cents each. \$1 25 per 10.

" **villosa.** Blue. June. 1 foot. 15 cents each. \$1 25 per 10.

Veronicas have long been known as beautiful garden plants.

Vesicaria sinuata. Yellow. May and June. 1 foot. 15 cents each.

Vinca herbacea. Purple. June to September. 4 inches. 15 cents each. \$1 00 per 10.

As its name implies, this is herbaceous. Its pretty blue flowers are produced in great profusion.

" **minor.** Periwinkle. Blue. May. 6 inches. 15 cents each. \$1 00 per 10.

" **var. rosea.** Rose. 6 inches. 20 cents each. \$1 50 per 10.

" **var. alba.** White. May. 6 inches. 15 cents each. \$1 00 per 10.

Viola cucullata. Blue. May. 6 inches. 10 cents each. 85 cents per 10.

" **var. picta.** Striped. May. 6 inches. 15 cents each. \$1 25 per 10.

" **sagittata picta.** Striped. May. 6 inches. 15 cents each. \$1 25 per 10.

" **striata.** Cream. May. 6 inches. 15 cents each. \$1 25 per 10.

The modest violet flowers please us all in the earliest days of spring, when they come forth to greet us. They do well either in the sunlight or in partial shade.

Vinca herbacea.

TENDER AQUATICS.

Nymphæas are among the most beautiful of water plants. Their large, dark green leaves float on the surface of the water, and their flowers rise well above them.

A half barrel plunged to its rim on a lawn and filled with fresh water every day or two, is a good plate for them in summer.

In winter time the bulbs can be kept in damp earth under the stage of a warm greenhouse. Three year bulbs of the following:

Nymphæa cœrulea. Blue. 75 cents each.

" **Zanzibarensis rosea.** Rose. 75 cents each.

HARDY GRASSES AND SUMMER BULBS.

Figures in parenthesis, indicate about the height of the plant when fully grown.

Arundo donax. (12 to 15 feet.) 35 cents each. \$2 50 per 10. Extra strong clumps, 50 cents to \$1 00 each.

" **var. variegata.** (5 to 7 feet.) 35 to 50 cents each.

Bambusa Metake. (5 to 6 feet.) Evergreen. 35 cents each.

Caladium esculentum. 15 cents each. \$1 00 per 10

Calamagrostis stricta variegata. (8 to 10 inches.) 35 cents each. \$2 50 per 10 \$10 00 per 100. Extra sized clumps 35 to 50 cents.

Erianthus Ravenna. (8 to 10 feet.) 35 cents each. \$2 50 per 10. \$15 00 per 100. Extra sized clumps, 50 cents to \$1 00 each.

Festuca glauca. (6 to 8 inches.) 25 cents each.

Eulalia Japonica. (8 to 10 feet.) 35 cents each. \$2 50 per 10 \$15 00 per 100. Extra sized clumps, 50 cents to \$1 00 each.

" **var. variegata.** (5 to 7 feet.) 35 cents each. \$2 50 per 10. \$15 00 per 100. Extra sized clumps, 50 cents to \$1 00 each.

" **var. gracillima univittata.** (5 to 7 feet.) 35 cents each. \$2 50 per 10. \$15 00 per 100. Extra sized clumps, 50 cents to \$1 00 each.

" **var. Zebrina.** (5 to 7 feet.) 35 cents each. \$2 50 per 10. \$15 00 per 100. Extra sized clumps, 50 cents to \$1 00 each.

Cynierium argenteum. Pampas Grass. (8 to 10 feet.) 35 cents each. Extra sized, 50 cents to \$1 00 each.

NEW RUDBECKIA LACINIATA "GOLDEN GLOW."

The Rudbeckias are among the most beautiful of our fall-blooming Wild Flowers, and are always greatly admired. Until recently no effort had been made to improve them as has been done with nearly all other flowers. But with the introduction of the "Golden Glow," we have a variety that would seem to defy improvement, as it is in itself a remarkably beautiful form. The parent has but single flowers, yellow petals with a purple conical disk in the centre, but, as will be seen by the illustration this disk is entirely hidden by the mass of petals which go to make up this double flower.

The plant is entirely hardy, and will thrive in poor soils, though attaining the greatest perfection in a rich, loamy one. It grows to a height of six feet, blooms profusely and continuously, and makes a desirable plant for cut-flower purposes.

Wm. Falconer, in *Gardening*, says of it; " * * * it is a good thing, and more elegant and beautiful than the double-flowered sun-flower (*Helianthus multiflorus*, fl. pl.) We got a little plant of it last winter, and in the spring planted it out in the garden in good soil. It is now six feet high, much branched, the branches inclining upwards and in bloom. *We hail it with delight as being one of the most distinct and beautiful large growing, hardy perennials that have been introduced for years.*

Price, 35 cents each. 3 for \$1 00. \$2 50 per 10.

Landscape Gardening.

We call particular attention to this branch of our business. It is under the personal direction of our J. Franklin Meehan.

We prepare plans for grading, road making and planting, either separately or for the entire work, and carry out these plans on the most favorable terms.

We also prepare plans for remodelling old places; superintend the carrying out of them or do the entire work ourselves.

Plans furnished for Hardy Herbaceous beds or gardens, shrubbery plantations, etc.

FRUIT TREES AND SMALL FRUITS.

STANDARD APPLES.

50 to 75 cents each.

Extra sized bearing trees, \$1.00 to \$1.50 each.

We call particular attention to the extra-sized apples enumerated in this list. They will give every satisfaction to customers who are anxious to secure fruiting trees at the earliest possible time. There is no difficulty in transplanting these trees, as many suppose, and, if they are pruned more or less at the time of planting, and set in good, rich soil, they will make a stout growth the first year, and probably set fruit the second season. They can be packed in quite small bales, considering their size, and shipped to any distance without any danger of losses. We have frequently transplanted this sized tree without losing a single one, and this, too, when late in the spring.

American Golden Russet. One of the most delicious apples. Medium sized; dark yellow, sprinkled with russet, with a tinge of red on the exposed side. Flesh yellowish, very tender and juicy, with a rich spicy flavor. Winter.

Baldwin. Probably the best known apple now in cultivation. The fruit is large, bright red. Flesh crisp, juicy and rich. The tree is a vigorous grower, and very productive. Winter.

Ben Davis. A very desirable variety, on account of its productiveness. Fruit large and very handsome, striped with red and yellow. It is of good quality, and the fruit can be kept throughout the winter. Winter.

Cornell's Fancy. A beautiful apple, much esteemed for table use. The tree is a vigorous grower and very productive. Fruit is of medium size, oblong; waxen yellow, shaded and splashed with crimson. Flesh white, tender, crisp, and juicy, with a pleasant sub-acid flavor. Fall.

Duchess of Oldenburg. A sort that is very popular, because of its many excellent qualities. The tree is a strong grower and a young and abundant bearer. Fruit large, streaked with red and yellow. Flesh tender and juicy with a pleasant sub-acid flavor. September.

Early Harvest. Taking into account its beauty, its excellent qualities for the dessert and for cooking, and also its productiveness, we think it one of the finest apples yet known. Fruit medium-sized, skin bright straw color when fully ripe, with a few faint white dots. Flesh very white, tender and juicy, crisp, with a rich, sprightly, sub-acid flavor. August.

Fallwater. This is a very strong grower and enormously productive. Skin yellowish-green, shaded with dull red. Flesh greenish-white, juicy, crisp, rather tender, pleasant sub-acid flavor. Of excellent quality. Winter.

Fall Pippin. The Fall Pippin is a noble fruit, and is considered the first of Autumn apples in the Middle States, where its beauty, large size and its delicious flavor for the table or for cooking, render it very popular. Skin yellowish-green, with a tinge of brownish-blush on one side. Flesh white, tender and mellow, with a rich, aromatic flavor. Winter.

Gravenstein. A German apple, considered to be one of the finest in that country, which reputation is fully sustained here, as it is unquestionably a fruit of first quality. It is very productive and an early bearer. Fruit large, bright yellow, and beautifully dashed and pencilled with light and deep red and orange. Flesh tender and crisp with a high-flavored, somewhat aromatic taste. Fall.

Hubbardston Nonsuch. Fruit large, yellow, shaded and striped with red. Flesh tender, yellowish, crisp, juicy, pleasant, sub-acid, slightly aromatic. An excellent sort. Winter.

Maiden's Blush. Fruit medium sized, with a delicate, waxen appearance, pale lemon-yellow, with a brilliant crimson cheek. Flesh white, tender and pleasant, sub-acid. Fall.

Red Astrachan. Tree an abundant and regular bearer. It is of good quality, and a handsome dessert apple. Fruit of medium size, almost entirely covered with deep crimson, with greenish yellow streaks. Flesh white, crisp, moderately juicy, with an agreeable, rich, acid flavor. Summer.

Ridge Pippin. Yellow, slightly shaded, sprinkled with russet and crimson dots. Flesh yellowish, juicy, crisp, with a sweet, slightly aromatic flavor. Late winter.

Roman Stem. Fruit of medium size, yellowish-white, sprinkled, with patches of dark russet. Flesh tender, juicy, with a rich, pleasant, musky flavor. A good sort, and a very productive one. Winter.

Rome Beauty. Fruit large, yellow, shaded and striped with bright red. Flesh yellow, tender, juicy, sprightly sub-acid. Winter.

Roxbury Russet. This is one of the best known and most popular sorts. The tree is a prodigious bearer, and the fruit keeps until late in the spring. Fruit medium-sized, dull green, covered with brownish-yellow russet. Flesh greenish-white, moderately juicy, with a rather rich, sub-acid flavor. Winter.

Smith's Cider. We recommend this apple above all others for Eastern Pennsylvania. It is enormously productive and a regular bearer. Fruit medium sized, yellow, though almost covered with large red stripes and shades. Flesh white, tender and juicy, of a pleasant, mild, sub-acid flavor. Winter.

Sweet Bough. A very fine apple, of best quality, perhaps only second to the Early Harvest. It is not quite as good for cooking, being too sweet, but it is an excellent table apple. Fruit medium sized, pale greenish yellow. Flesh white, very tender and crisp, with a rich, sweet, sprightly flavor. Tree bears abundantly. Summer.

Wine Sap. Tree an early and abundant bearer. Fruit medium-sized, dark red, with a few streaks. Flesh yellow, firm, crisp, with a rich, high flavor. Winter.

Yellow Transparent. An apple of somewhat recent introduction from Russia, but which has been found remarkably desirable in this country. It is a very early bearer, young trees in nursery rows frequently having fruit on them. The fruit is of medium size, pale yellow. Flesh yellowish white, tender, juicy, sprightly, sub-acid. Summer.

York Imperial. Fruit red. Flesh yellowish, firm, juicy, pleasant, mild, sub-acid. The tree is a good bearer. We consider this to be one of the best apples for Eastern Pennsylvania. Early winter.

CRAB APPLES.

50 to 75 cents each. Extra sized, \$1.00 to \$1.50 each.

Red Siberian. Fruit small, yellow, with scarlet cheek. Bears early and abundantly, and can be depended on to bear regularly every year. September and October.

Transcendent. This sort is immensely productive. Fruit bright red. September and October.

Yellow Siberian. Fruit large, and of a beautiful golden yellow. September and October.

Van Wyck Sweet. Fruit large, yellow, shaded light red, Flesh tender and sweet. October and November.

APRICOTS.

50 cents each. Extra sized, \$1.00 each.

Breda. Small, round, dull orange, marked with red in the sun; flesh orange colored, juicy and rich. July.

Moor Park. One of the largest and finest apricots; yellow, with red cheek. Flesh orange, sweet and juicy. Very productive.

ASPARAGUS.

\$1.25 per 100. \$8.00 per 1000.

The plants we offer are not such as are usually sold by nursery-men and seedsmen, but are good, strong plants, three years old. These will be ready for cutting much sooner than smaller plants would. Nor do we dig them before they are needed. Consequently our plants are always fresh and produce good results.

Conover's Colossal.

BLACKBERRIES.

Strong canes, 75 cents per 10. \$5.00 per 100.

Dorchester. An excellent, productive variety, and a vigorous grower. Fruit large, black, juicy, and of good quality. Ripens about August 1st.

Kittatinny. A strong grower; canes very hardy and productive. Fruit large, rich glossy black, moderately firm, juicy, rich, sweet, excellent. Ripens early and continues a long time. One of the most valuable sorts for general planting.

Lawton. An old favorite, esteemed for its productiveness and large size; delicious when fully ripe, but turns black in advance of ripening. Medium to late.

Wilson's Early. A hardy and productive variety. Fruit large, black, and very sweet. A very early sort.

Wilson Junior. Noted for its productiveness. There is no other blackberry that can compare with it in size and quality. Fruit large, luscious and sweet. Ripens earlier than its parent.

DEWBERRY.

\$1.00 per 10.

The Dewberry is now planted in every garden, as the fruit ripens before the Blackberry. The Lucretia is an improved sort and of great merit. The fruit is large and good, having that sweet, juicy flavor peculiar to the wild sort. Should be treated the same as Blackberries.

Lucretia.

CHERRIES.

50 cents each. Extra size, \$1.00 to \$1.50 each.

Many planters fail in transplanting the Cherry, because they either do not prune the trees or they allow them to bloom the first year. Both exhaust the sap in the tree before the roots start out and produce a fresh supply. The Cherry should be pruned very much, and besides this, all the flower buds should be picked off.

Black Eagle. Fruit large, heart-shaped. Skin deep purple, or nearly black. Flesh deep purple, tender, with a rich, high flavored juice, superior to the old Black Heart. Ripens early in July.

Early Purple. An indispensable variety among the early sorts. It is a prolific bearer, and one of the first to ripen. Medium size, dark red, becoming purple at maturity. Flesh tender, purple and juicy, with a rich and sweet flavor. Early June.

Early Richmond. This is what is known as the Sour or Pie Cherry. It is largely planted on account of the large size of its fruit and its excellent quality. The tree is a prodigious bearer, rarely failing to produce a large and full crop. It does not grow quite as large as the Sweet Cherries, but it commences to bear at a younger age. Fruit rather above medium in size, dark red, almost black when fully ripe. Flesh juicy, rich, acid. Last of June.

Cov. Wood. A very productive variety and one of the most desirable. Fruit large, light yellow, shaded and marbled with bright red. Flesh nearly tender, juicy, sweet, rich and delicious. Middle of June.

May Duke. An excellent variety and very productive. Fruit large, dark red, juicy, sub-acid, rich. Ripens a long time in succession. June.

Rockport. A strong grower and a good bearer. Fruit large, bright red, shaded with pale amber. Flesh firm, juicy, sweet, rich, with an excellent flavor. Ripens early in June just before May Duke.

Schmidt's Bigarreau. This is one of the best varieties, and is largely planted on account of the very large size of the fruit and its excellent quality and productiveness. Fruit deep black flesh dark, tender, very juicy, fine flavor. July.

White Caroon. Similar to the old White Ox-Heart, but of much better quality. Fruit large, yellowish-white, firm and juicy.

Windsor. One of the best of the late varieties. Fruit large, liver-colored. Flesh remarkably firm and of fine quality. July.

Yellow Spanish. A very popular variety and very productive. Fruit large, pale yellow, with a bright red cheek. Flesh firm, juicy and delicious. End of June.

CURRANTS.

\$1.50 per 10. \$10.00 per 100.

Extra sized, 4 year plants, \$2.50 per 10.

The Black Currant makes excellent tarts and preserves. The Cherry and the Versailles have large berries and bunches, and are very desirable. The fruit of Fay's Prolific is as large as Versailles, and it has a longer bunch.

Black Naples.

Cherry. Red.

Versailles. Red.

White Grape.

Fay's Prolific. Red.

GOOSEBERRIES.

The Downing and Smith's Improved are more largely planted than any other sort, as they bear enormous crops every season. They are strong, vigorous growers and require no more than ordinary attention in the garden.

The Industry is one of the English sorts, which has been found to do well in this country if a little attention be given it. A moist, cool soil, somewhat shaded, exactly suits it, and by keeping a mulch of manure constantly around it on the surface of the ground and a few stones on this, it will be all that is necessary. Fruit large, red and is produced abundantly.

Downing. \$1 50 per 10. \$10 00 per 100.

Smith's Improved. \$1 50 per 10. \$10 00 per 100.

Industry. 25 cents each. \$2 00 per 10.

GRAPES.

BLACK VARIETIES.

25 cents each. \$2.00 per 10. \$15.00 per 100.

Barry. (Rogers' No. 43.) Bunch large, but rather short. Berries large, delicate, sweet and tender. Vine vigorous and productive. Ripens with Concord.

Clinton. This is valued for its lateness and its keeping qualities. Bunches small and very compact. It is not a sweet grape until very ripe. A vigorous grower, and is very useful where a strong and rapid growing vine is wanted for covering arbors or trellises.

Concord. Probably the best known and most largely grown of all grapes. Bunch large; berries sweet, tender and juicy. Medium early. It is very productive and always reliable.

Hartford Prolific. Hardy, vigorous and productive. Bunch large and rather compact. Berry large, black. Flesh sweet and juicy. Ripens among the earliest.

Moore's Early. A strong grower and moderately prolific. Bunch medium; berry large, flesh pulpy and of good quality. One of the first to ripen.

Wilder. (Rogers' No. 4.) A very hardy and vigorous vine, and a prolific bearer. It is a very good kind and ripens about the same time as the Concord. Bunch large, and compact; flesh tender, sweet and juicy.

Worden. Bunch large, compact; berries larger than Concord, and it ripens a few days earlier; excellent flavor.

RED, REDDISH AND PURPLE VARIETIES.

Brighton. Bunch large and well formed; berries above medium to large. It is of excellent quality and flavor. Ripens early, with the Delaware.

Delaware. This variety is probably as well known as the Concord. Bunches of medium size and compact; berries small, light red, sweet with a musky aroma.

Lindley. (Rogers' 14.) Very vigorous and productive; bunches medium size, compact, red; flesh tender, sweet and juicy; ripens before the Concord.

Salem. (Rogers' 53.) Bunches large and compact; berries large and darker in color than Catawba; flesh tender, juicy and sweet; ripens after the Delaware.

WHITE VARIETIES.

Duchess. Bunch medium and compact; berries medium; skin thick; flesh tender, juicy, sweet, and in quality ranks as best. Very vigorous and productive; ripens before the Concord.

Lady. Bunch medium; berries large, with thin skin; pulp tender, sweet and pleasant; ripens early.

Martha. A very productive variety; bunch medium, not very compact; berries large; flesh similar to Concord, perhaps a little sweeter; ripens a few days earlier than Concord. An excellent white variety.

Niagara. This is perhaps one of the most popular grapes of recent production. It is a very strong grower and does not seem as much subject to mildew as many of the other sorts. We find it particularly desirable for Eastern Pennsylvania. Bunches large, compact; berries large; skin thin, but tough; flesh slightly pulpy, tender and sweet. It has somewhat of a foxy odor before it is fully ripened; but when mature this is lost to a great extent; ripens with the Concord.

Pocklington. This is a strong and vigorous grower; bunch medium; berry large; flesh pulpy, juicy, and of fair quality; ripens after the Concord.

PEACHES.

One year old, 25 cents each. \$2.00 per 10. \$15.00 per 100.

Peaches do well in all situations, except low, damp ones, and even in these they succeed for a time. It is a mistaken idea some have that they do not thrive in this district. Few fruits give more satisfaction for the time it lasts than a peach tree. The tree should be well pruned when transplanted.

Alexander Early. Medium size. Skin greenish-white, nearly covered with deep rich red. Tree very productive. One of the best early varieties. July.

Amsden's June. Medium size. Skin white, nearly covered with purple. Flesh juicy and sweet. July.

Crawford's Early. A very fine, large yellow peach of excellent quality. Tree exceedingly prolific. One of the most popular sorts. Early September.

Crawford's Late. An excellent yellow peach; very large and productive. Late September.

Crosbey. Valuable especially for the unusual hardness of its fruit buds. Medium; bright yellow with crimson splashes and stripes, very attractive; flesh bright yellow, red at the pit, juicy, rich. An abundant and regular bearer. Ripens before Crawford's Late.

Elberta. Large; yellow with red cheek, juicy and of high quality; flesh yellow and melting. A very valuable sort. September.

Hale's Early. Medium size; flesh white, of good quality. Middle August.

Morris White. Medium size. Creamy white with red cheek. Flesh white and juicy. Middle of September.

Mountain Rose. Large, round. Skin white, partly covered with dark red; flesh white and very good. Early September.

Oldmixon. Large, white and red. Flesh pale and juicy. A very productive and valuable variety. Middle of September.

Rivers' Early. Large, creamy-white with pink cheek. Rich flavor. One of the best of the early varieties.

Stump the World. A handsome red and white sort. Good size and quality. Very productive. End of September.

Susquehanna. A very large yellow peach; melting, rich and fine. Early October.

Troth's Early. Well-known in market as a good red, early sort. Early August.

Wager. A very late, lemon-colored peach of good quality. October.

Ward's Late. An excellent late peach. Flesh nearly white; excellent flavor. Last September.

STANDARD PEARS.

We call particular attention to the trees marked "bearing size." These are very large trees, transplanted two years ago, and which are from 1½ to 2½ inches in diameter, and from 6 to 10 feet in height. They are fine stock and will give general satisfaction, when it is desirable to get fruit as soon as possible. These trees will transplant quite easily; but should be pruned more or less when moved. The trees marked at 75 cents and \$1 00 are very nice young trees, and as a rule are larger than those usually offered as extra stock by many nurserymen.

Bartlett. Though an old variety, this is still probably the most popular of all, and is, perhaps, more largely planted than any other kind. It seems to bear abundantly in all locations, and can be relied on to bear more or less of a crop every year. Fruit large, skin thin, smooth, a clear yellow; flesh white, very fine-grained. It is full of juice; sweet and high flavored. Last of August. 75 cents to \$1 50 each.

Belle Lucrative. This is an excellent fall pear. Medium size; pale yellowish-green, slightly russet; flesh juicy, sugary and delicious. Last of September. 75 cents to \$1 50 each.

Beurre d'Anjou. This is one of the very best varieties; fruit large, greenish-yellow, sprinkled with russet, sometimes shaded with pale crimson; flesh white, melting and juicy. This variety is one of the best for cultivating in Eastern Pennsylvania, and it can generally be relied on to bear a good crop. October. 75 cents to \$1 00 each.

Buffum. A variety of the first quality. It is a strong, upright grower, bearing large, regular crops, and it is also a very handsome fruit. Fruit of medium size; skin fair, deep yellow, with bright blush on one side of the fruit; flesh white, buttery, sweet and of excellent flavor. September. 75 cents each. Extra sized, \$1 50 to \$2 00 each.

Clapp's Favorite. An excellent and very productive sort. Fruit large; skin thin, pale lemon-yellow with bright red cheek; flesh white, fine-grained, juicy and sweet. It should be gathered about one week before maturing and allowed to ripen in the dark. It ripens about two weeks before the Bartlett. August. 75 cents to \$1 75 each.

Duchess d'Angouleme. A well-known late pear, which is largely grown. It is one of the best for growing as a dwarf. Fruit large; yellow, spotted with russet; very juicy and of excellent flavor. Ripens in October, and will keep all winter. 75 cents to \$1 00 each.

Flemish Beauty. An old variety but still very largely planted. Bears early and abundantly; fruit large; pale yellow, but mostly covered with patches of russet-brown; flesh yellowish-white, juicy, melting, very saccharine and rich. It should be gathered from the trees before it is matured and allowed to ripen in the dark. It has a remarkably fine flavor. September. Extra sized, \$1 50 to \$2 00 each.

Howell. A valuable and desirable variety; fruit rather large; light waxy yellow, thickly sprinkled with very small russet dots; flesh white, juicy, melting. We consider it one of the standard sorts. September. 75 cents to \$1 00 each. Extra sized, \$1 50 to \$1 75 each.

Idaho. A new variety which has been highly recommended by all who have fruited it. It is described as being exceedingly productive. Fruit large and of excellent quality; skin golden-yellow, with russet spots; flesh white, fine-grained, very tender and buttery, with a rich, subdued acid flavor. Ripens a month later than the Bartlett, and will keep for a long time. First of October. 75 cents to \$1 00 each.

Kieffer. This is a very vigorous-growing sort, which seems to thrive everywhere. It is a handsome and regular bearer, producing fruit of large size; skin rich, golden-yellow, sprinkled thickly with small dots; flesh slightly coarse, juicy and melting. It bears early, and the fruit can be kept for some time. It should not be allowed to over-bear, and to get the best quality of fruit, it should be ripened in the dark. \$1 00 each. Extra sized, \$1 50 to \$2 00 each.

Lawrence. A desirable winter variety. It is an early and abundant bearer. Fruit medium size; lemon-yellow, flesh white, juicy, melting and sweet. It can very easily be kept until the first of February. November. 75 cents to \$1 50 each.

Louise Bonne. Fruit large; pale green, overspread with brownish-red in the sun; flesh white, very juicy and melting, with a rich and excellent flavor. It is a vigorous grower and very productive. September. Extra sized, \$1 50 to \$2 00 each.

Manning's Elizabeth. An exceedingly productive variety and one of the most desirable sorts of its season. Fruit of medium size; bright yellow, with red cheek; flesh white, juicy and very melting, with a saccharine, but very sprightly aromatic character. We consider it one of the best small pears and a beautiful dessert fruit. August. Extra sized, \$1 50 to \$2 00 each.

Seckel. The Seckel Pear is well known everywhere as one of the finest varieties ripening in its season. It is an abundant bearer, though it does not commence to bear as early as some other varieties. Fruit medium size; dull yellowish-brown, with russet red cheek; flesh white, very juicy and melting, with a rich, spicy flavor. It ripens gradually in the house from the end of August until the end of October. 75 cents to \$1 50 each.

Sheldon. This bears abundantly. Fruit medium; skin greenish-yellow, mostly covered with light russet; flesh white, very juicy, melting and sweet. We consider it one of the best pears in its season and recommend it highly. October. 75 cents to \$1 00 each. Extra sized, \$1 50 to \$2 00 each.

Vermont Beauty. Described as an abundant early bearer and very productive. Fruit of medium size; skin yellow, nearly covered with carmine; flesh melting, sprightly, juicy, and of the best quality. It has an excellent flavor. It is considered one of the most desirable of recent introductions. Is one of the most beautiful pears in its general appearance. October. 75 cents to \$1 00 each.

Wilder. This is one of the newer varieties and is very highly recommended. It is a very abundant and regular bearer. Fruit of medium size; greenish-yellow, with red cheek; handsome; melting; sweet; pleasant. First of August. 75 cents to \$1 00 each.

DWARF PEARS.

50 cents each. Extra sized, 75 cents each.

Bartlett. September.

Beurre d'Anjou. Winter.

Clapp's Favorite. Middle of August.

Duchess d'Angouleme. End of October.

Kieffer. October.

Lawrence. Winter.

Seckel. September and October.

PLUMS.

75 cents each. Extra sized, \$1.00 to \$1.50 each.

Bradshaw. Large and early; dark violet red; juicy and good. Very productive.

Imperial Cage. Medium size, greenish, juicy, rich and delicious. Tree, a strong grower and very productive. Middle of August.

Lombard. Medium size. Violet Red. Flesh yellow and juicy. A strong grower and bears well. September.

Reine Claude. Large size, and of fine flavor; green. Hangs long on tree. Middle to end of September.

German Prune. Medium size, blue; juicy, rich, fine. Tree vigorous and very productive. September.

JAPANESE PLUMS.

Extra sized trees, \$1.00 to \$1.50 each.

The Japanese Plums are of comparatively recent introduction, but they have been found very successful and are now being largely planted. This is especially the case in Eastern Pennsylvania, where plums have hitherto almost universally failed. They are extremely productive, are of excellent quality, and the trees are very hardy and vigorous. Though they are more or less attacked here by the Curculio, it does not seem to injure them, and the fruit matures in perfect condition.

Abundance. Very large; lemon-yellow, nearly over-spread with bright cherry; flesh orange-yellow, melting, rich and highly perfumed. It is an abundant and an annual bearer. August.

Burbank. Very similar to Abundance, but of deeper color, and ripening later in the season. Fruit large; color cherry-red; flesh deep yellow. Very sweet. Tree a vigorous grower, and usually begins to bear the second year after being transplanted. Last of August.

Willard. This is, perhaps, the best of the Japanese Plums. It is a vigorous grower. When ripe it is a dark red, bordering on purple. It will keep for a long time, not being inclined to decay. It is an extremely early variety, ripening a month before Abundance, and before any other plum, European or Native. For several years in Geneva, New York, it has ripened July 15th to 20th.

QUINCE.

50 cents each. Extra sized, 75 cents to \$1.00 each.

The Quince needs good, moist, cool, well drained soil to grow in.

Meech's Prolific. Strong grower and productive, and commences to bear when quite young.

Orange. Though many new varieties have been introduced in recent years, this sort is still considered the best of all. It is a good grower, very productive, and the fruit is the largest size.

RASPBERRIES.

Strong canes, \$1.00 per 10. \$6.00 per 100.

Raspberries are often said to run out, but with attention to enriching the ground, keeping the soil cool, and cutting out of weak canes, to strengthen the others, the good old kinds are as good yet as many of the newer ones. Although generally unnecessary, some think it pays to cover the canes in winter, either by tying with straw, or bending down and covering with a few inches of earth.

Caroline. Yellow. Canes very hardy.

Cuthbert. Hardy, sweet and productive. Deep crimson.

Clegg. We grow this for those who like our native black raspberries. This is an improved sort, and prolific bearer.

Hansell. Medium size, bright crimson, firm; flavor fine, canes vigorous, hardy and productive. Earliest of all.

Thompson's Early. Medium sized, red, vigorous and productive. Particularly desirable for its early ripening.

Turner. A very hardy sort, which makes it a great favorite with planters. Red, moderately firm, sweet and juicy, and of very good quality.

RHUBARB.

Strong root, 25 cents.

The Rhubarb likes a very deep, rich soil, and in planting plenty of manure should be used. The following sorts are all good.

Linnæus.

Magnum Bonum.

Prince Albert.

Victoria.

Kelway's Queen.

STRAWBERRIES.

Ordinary runners, \$1.00 per 100.

For general cultivation, plants are best in beds. These should be four feet wide, and should contain three rows of plants. The two outside rows should be planted nine inches from the edges of the bed, and the inner one in the center of it, with the plants fifteen inches from each other in the rows. All runners should be removed as soon as formed, as much more fruit of larger size will result from this practice. Beds should be renewed about every two years.

When winter has fairly set in, say towards the middle of December, a slight covering of well-rotted manure is very beneficial.

What may be thought of a certain variety of strawberry depends very much on soil and situation. Still some are nearly always good, and as such we would name Sharpless, Capt. Jack, Cumberland, Chas. Downing and Bubach.

Captain Jack.

Bubach.

Cumberland Triumph.

Charles Downing.

Sharpless.

Candy.

Mention Paper

... Interesting ...

Information *and* Instruction

is given to amateurs and others in all branches of gardening, which embraces planting, pruning and care of all kinds of trees, shrubs, evergreens, hardy border plants, etc., etc., vegetable gardening, fruit orchards, conservatory work; in nature in its botanical features, of the woods and fields—so productive of those lovable things—the wild flowers and ferns; new or rare plants; biographical and literary subjects, and in fact all horticultural topics, in

MEEHANS' MONTHLY

an illustrated periodical of twenty pages. Among its noteworthy features may be mentioned the monthly colored plate, a work of art of acknowledged merit, executed by Mr. Alois Lunzer, the famous horticultural artist, and Messrs. Prang

& Co., of Boston, lithographers, whose name is known in every household; the condensity of its articles, placing the matter in the most practical manner to the reader; the immense field covered by its articles, which is ably managed by the Editor, . . .

Thomas Meehan, from a life experience in horticultural pursuits. Mr. Meehan formerly edited the *Gardeners' Monthly*, a pioneer work of thirty years, which is still gratefully remembered by many of its subscribers. "**The Native Flowers and Ferns of the United States,**" a four-volumed work, illustrating in Prang's lithographs and describing the native ferns and flora, was also from the pen of THOMAS MEEHAN. The two above named works combined may properly describe the present magazine, in fact, the colored plates of the present work were prepared for "*The Native Flowers and Ferns,*" and they continue unduplicated. A complete set forms an invaluable work of reference, calculated to interest all.

Such is *Meehans' Monthly*, and although but just completing its sixth volume, it is already recognized as a leading authority on all horticultural matters. As the work was planned for the use of all who can be interested, the price was arranged within the reach of all. Two dollars per annum is little for the twelve colored plates alone. The value of a magazine is proven by a trial subscription, and this is respectfully solicited. Sample copies are distributed free of charge.

THE · MARIANNA · PLUM.

Its Use As A Stock For Working The Prune, Plum And Apricot.

While we believe that as a stock, the MARIANNA PLUM is proving more successful than any other, we have personally not had much experience with it. We have taken some pains to get the views of prominent nurserymen in this country concerning it and are much pleased with their replies, which seems to prove conclusively that AS A STOCK IT IS UNEQUALLED BY ANY OTHER VARIETY.

P. J. BERCKMANS, President of the American Pomological Society, writes:—"We have used this stock for four years past for propagating Plums, both of Native and Japan type and find it superior to any other stock heretofore used for this purpose. There is almost an entire absence of suckers, and the growth of any variety of Plum worked upon the Marianna is better than upon either Peach or Plum Stocks. The Peach if budded upon the Marianna makes a very vigorous growth the first year, but gives lesser results during the second, and the tree seldom thrives afterwards. Those who have used the Marianna for propagating Peaches are discarding it. It is not free from borer and from Angulola as represented by some growers, but less liable to injury from these than the peach stock."

ELLWANGER & BARRY, Rochester, New York, say:—"Yours of the 20th inst. at hand. Relative to Marianna Plum, we have not yet had a chance to give it a fair test as a stock, having tried it only in a limited way the past two years, but we are pleased to say that so far, it promises to be a useful stock, and we think Nurserymen will employ it extensively."

T. V. MUNSON, Denison, Texas:—"In reply to yours of the 20th. I have used the Marianna Plum as a stock for other Plums and for Apricots. All take readily upon it. Cannot say what the outcome of Apricot upon it will be, but fear the Apricot will overgrow it, as does the Peach. But as a stock for other Plums, I know nothing better, nor so good.

It keeps sap up all summer.

It never sprouts from the root.

It endures and thrives in a great variety of soils and climates."

STARK BROS. NURSERY CO., say:—"We believe—in fact know—that the Marianna is the most perfect stock in use for the Plum, Prune and Apricot, and have used it and advocated its use for the past six years. For Plums and Apricots, Marianna is undoubtedly the BEST stock EXISTING."

JUDGE SAMUEL MILLER, in March issue of *Popular Gardening*, says:—"I have both Peach and Apricot on Marianna that seems to be as vigorous as on the peach root. The Marianna never suckers, and is not troubled with borers, this making it the most valuable stock for all stone fruits."

FOR PRICES OF MARIANNA AND OTHER FRUIT STOCKS. SEE OTHER SIDE.

Fruit Stocks and Seeds

Our seedlings will be ready for shipment FROM HERE about the first of the year.

We pack all shipments with the greatest care, using every precaution to keep them from freezing after leaving our hands.

Packing charged extra, but only sufficient to cover cost.

Send stamp to pay postage when samples are requested.

No less than 10,000 of any one grade or variety furnished at the 10,000 rate
